Offensive Mode Air Missions

Escort: The general purpose of an Escort mission is to keep enemy interceptors from destroying friendly strike air units, possibly with fighter air units from a different airbase.

Air Superiority: The general purpose of an Air Superiority mission is to lure enemy air units into combat in order to weaken or destroy them.

Surface strike : The general purpose of a Surface Strike mission is to destroy or damage enemy ground units or installations by bombing the target hex.

Close Air Support (CAS): The purpose of a Close Air Support mission is to support friendly ground units in a declared combat situation, whether in defence or attack.

Interdiction Strike: The general purpose of an Interdiction Strike mission is to interdict enemy routes of advance, reinforcements, or retreat.

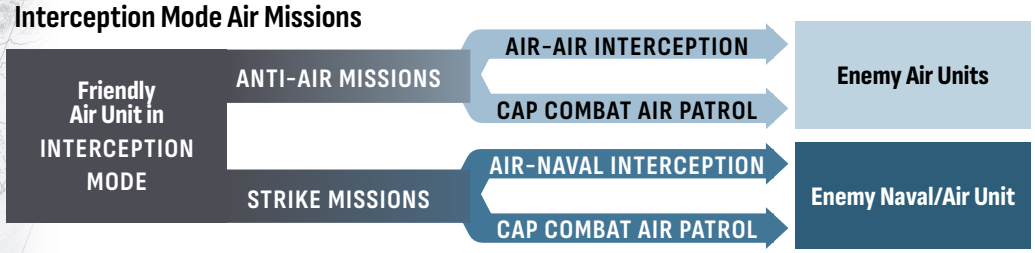

Reconnaissance Mission (RECCE): Reconnaissance is crucial to strike enemy ground units and installations, although these are always treated as detected and may be the target of a strike mission, reconnoitring the target before the actual surface strike doubles the effectiveness.

Anti-Ship Missile Strike (AS): The general purpose of an ASM is to destroy or damage enemy surface action units, carrier units, or naval transport units.

Sub-Surface Strike (SS): The general purpose of a Sub-Surface Strike mission is to destroy or damage enemy submarine units.

Minelaying / Minesweeping: The purpose of Minelaying is to attack surface naval units through mine attacks. Minesweeping involves systematic search and clearance operations to locate and remove mines.

Interception Mode Air Missions

Air-Air Interception: Air-Air Interception is used to attack enemy air units that are engaged on Offensive missions. Intercepting Interception missions is not possible.

CAP (Combat Air Patrol): The general purpose of CAP is to protect the CV and CVN carrier units from enemy air or naval units. During all Action Stages they project a protective curtain around themselves.

Air-Naval Interception: Air-Naval Interception is used to attack enemy naval units during the enemy player's portion of a Movement Phase.
