INTRODUCTION

This scenario booklet contains the scenario briefings, rules examples and playthroughs.

Each scenario comes with a small scenario briefing. This briefing is **very important** as it lists everything you need to set up the game, notably the markers for Special Forces, Air Reconnaissance, Transport, Supply, and their starting values and the scenario special rules (SSR). The SSR are composed of scenario specific changes to rules or additional variants, for example the Sequence of Play is shortened in the Exercise scenarios.

The Pre-GT1 rules are setting the stage for the upcoming battle and are therefore very important. The Reaction player sets up first those units without exact hex coordinates. Afterwards setup can be done simultaneously.

To determine the number of naval units that may move in the pre-GT1 Movement, use [11.3] Naval Unit Movement rule. Except for the Campaign scenarios, check their SSR.

If for air units reference is made to a StratHexes instead of the air base on the displays, use any eligible air base in the indicated StratHex.

Important: Before starting a scenario, players should agree on whether they will be using the standard or advanced rules and which optional rules (if any) are going to be used.

Red Strike comes with 20 scenarios that may be played, some with variants.

10 SMALL SIZED "EXERCISE SCENARIOS": Very small solitaire Scenarios taking 15-60 minutes to play. These Scenarios are intended to teach players the basic concepts of the game.

6 MEDIUM SIZED "BATTLE SCENARIOS": 2-player Scenarios using the full rule set but limited map space or even specific maps and number of counters. Playable in a 16-45 hours or so.

4 LARGE SIZED "CAMPAIGN SCENARIOS":
2-player or teams: The whole enchilada. All of the Scenarios start on August 1st 1989 and end as per the Victory conditions or at the end of GT 15. The differences of the Scenarios lie in the ready status of the belligerents.

"99 Red Balloons" Scenario 1 is a surprise attack of the WP on NATO on 1st August. No major preparations have been made on either side of the Iron Curtain.

Supply levels at start: NATO 500 SP; WP 500 SP

"We Didn't Start The Fire" Scenario 2 is based on short period of rising tensions which lead to war. Supply levels at start: NATO 1000 SP; WP 1000 SP

"Land of Confusion" Scenario 3 is war breaking out after a prolonged mobilization phase in which diplomatic efforts are undertaken to avoid the war, in vain.

Supply levels at start: NATO 1500 SP; WP 1500 SP

"Two Tribes" Scenario 4: A prolonged period of sabre rattling and mobilization undermines diplomatic efforts and leads to "continuation of politics by other means".
This time NATO attacks to free the oppressed populations of Eastern Europe.

Supply levels at start: NATO 1500 SP; WP 1500 SP

ERRATA & CLARIFICATIONS FORMATTING : Rules changes & clarifications are marked in this manner

EXERCISE SCENARIOS

1. CROSSING SWORDS

UNIT COUNTERS: 18 **SCENARIO LENGTH: 5 GT** **EXERCISE MAP E1**

BRIEFING

Objective of this learning scenario: To understand how land warfare is handled in the game. Specifically, how to manoeuvre ground units, conduct ground to ground combat and the influence of ZoCs.

SCENARIO SIZE:

NATO: 10 ground units

WP: 7 ground units

SEQUENCE OF PLAY (SOP):

- Initiative Determination Phase
- Unit Assignment Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

SETUP: Check the setup displays

REINFORCEMENTS: None

SPECIAL SCENARIO RULES: There is no Supply Phase. No checking of supply in the first training scenario. There are no new SPs received.

VICTORY CONDITION(S):

- Capture hex 0401 and hold at end of GT 5

AND

- Defend hex 0410 and control it at end of GT 5

GENERAL MARKERS ON TRACK	
Game Turn marker:	GT 1
END game turn:	GT 5
Air/Naval combat resolution marker:	Not Used
DEFCON:	Not Used
Battles Won	0
Victory Points	Not Used
World Opinion	Not Used
Weather:	Not Used
Initiative at start:	WP
NATO MARKERS ON TRACK	
Supply points:	40
Special Forces GT & GAME:	Not Used

Theater Transport Capacity GT:	Not Used
Amphibious Combat Transport Capacity GT & GAME:	Not Used
Airmobile / Paradrop Combat Transport GT & GAME:	Not Used
WP MARKERS ON TRACK	
Supply points:	12
Special Forces GT & GAME:	Not Used
Air Reconnaissance GT & GAME:	Not Used
Railroad Capacity GT & GAME:	Not Used
Theater Transport Capacity GT:	Not Used
Amphibious Combat Transport Capacity GT & GAME:	Not Used
Airmobile / Paradrop Combat Transport GT & GAME:	Not Used

VARIANTS:

- Use exercise map 2 (woodlands design) and keep all other briefing details.
- Initiative player: NATO. Mission: Capture hex 0410 and defend hex 0401
- Add for WP "Available Combat Transport (GAME)" marker at 2 REs and "Available Combat Transport (GT) marker at 2 RE
- Use the Battles Won mechanic and determine Initiative each GT.

2. ABLE ARCHER (MISSILE COMBAT)

UNIT COUNTERS: 4 **SCENARIO LENGTH: 1 GT** **EXERCISE MAP E1**

BRIEFING

Objective of this learning scenario: Learn about the long-range missile units (LRMU) and their unique capability to affect the battlefield over long distances.

SCENARIO SIZE:

NATO: 2 ground units

WP: 2 ground units

SEQUENCE OF PLAY (SOP):

- First Action Stage

SETUP: check the setup displays

REINFORCEMENTS: None

SPECIAL SCENARIO RULES: None

VICTORY CONDITION(S):

- Achieve at least 1 hit with HE warheads on a NATO ground unit
- Achieve at least 1 hit with HE warheads on a NATO air base

GENERAL MARKERS ON TRACK	
Game Turn marker:	Not Used
END game turn:	Not Used

Theater Transport Capacity GT:	Not Used
Amphibious Combat Transport Capacity GT & GAME:	Not Used
Airmobile / Paradrop Combat Transport GT & GAME:	Not Used

VARIANTS:

- Use nuclear warheads
- Use chemical warheads
- Treat the NATO units as having Patriot ABM systems. [26.4.]

3. RED FLAG

UNIT COUNTERS: 26 | SCENARIO LENGTH: 2 GT | EXERCISE MAP E1

BRIEFING

Objective of this learning scenario: Learn about the different types of missions conducted by the respective Air Forces and how they are carried out. Also, the importance of planning which mode to put air units in (interception or offensive) during the Unit Assignment Phase. Along the way, you'll get an insight into the capabilities of different aircraft.

SCENARIO SIZE:

NATO: 12 air units, 1 ADN

WP: 12 air units, 1 ADN

SEQUENCE OF PLAY (SOP):

- Unit Assignment Phase
- Supply Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

SETUP: check the setup displays

REINFORCEMENTS: None

SPECIAL SCENARIO RULES:

- ADN: fully operational at start, limited after 2nd hit
- Initiative: WP has the initiative on GT 1, NATO has the initiative on GT 2

VICTORY CONDITION(S):

- The side achieving the most hits on the enemies ADN, air base, and/or air units.

VARIANTS:

- Play without the ADN installations
- Use air reconnaissance missions. 2 Recce missions available per GT

GENERAL MARKERS ON TRACK

4. SEDAN 1989

UNIT COUNTERS: 15 | SCENARIO LENGTH: 3 GT | EXERCISE MAP E4

BRIEFING

Objective of this learning scenario: This is the first scenario in which the combat of combined arms, i.e. ground and air units as well as helicopters supporting ground combat, can be tried out. Reconnoitre your targets and get artillery support to have the punch it takes to take the objective.

SCENARIO SIZE:

FRANCE: 3 ground units
3 air units
1 helicopter unit

GERMANY: 5 ground units
2 air units
1 helicopter unit

SEQUENCE OF PLAY (SOP):

- Assessing Reinforcements Phase
- Unit Assignment Phase
- Supply Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

SETUP: check the setup displays

REINFORCEMENTS:

Germany: 1 Air Recce mission per GT

France: 1 Air Recce mission per GT

SPECIAL SCENARIO RULES:

Supply is used only in the variant of this scenario.

Use NATO markers for France.

Use WP markers for Germany.

German forces MUST have made use of the following assets to claim victory:

- Air reconnaissance
- Ground-ground missile
- Strike air mission with eligible non-helicopter air units
- CAS with helicopter unit
- Artillery support

The helicopter unit may be placed in the hex (clear terrain) OR on the air base.

Additionally:

- no deliberate or hasty combat formations allowed.

VICTORY CONDITION(S):

Take control of hex 1008 and occupy at the end of GT3

VARIANTS:

- Add Supply Rule: Germany 40 SPs, France 35 SPs. Allows players to use hasty and deliberate combat formations
- Add chemical attack to the mandatory assets to use by Germany
- Add tactical nuclear attack to the mandatory assets to use by Germany

5. BALTOPS

UNIT COUNTERS: 22 | **SCENARIO LENGTH: 3 GT** | **EXERCISE MAP E5**

BRIEFING

The Skaggerak is the door to the North Sea for the Soviet Baltic Fleet. If it wants to threaten Western Europe from the sea, then the WP has to get hold of Denmark. Even more important is to deny NATO naval forces entry to the Baltic Sea. An amphibious operation is shortcutting the ground units of the Northern Front moving up through Denmark from the South.

OBJECTIVE OF THIS LEARNING SCENARIO:

Entry of the fleets. The point here is to get a sense of how limited and yet important the ship units of both sides are. At least when it comes to amphibious operations and blocking the enemy's supply routes.

SCENARIO SIZE:

NATO: 12 naval units

WP: 10 naval units

MAP: Exercise map E5 BALTOPS

SEQUENCE OF PLAY (SOP):

- Assessing Reinforcements Phase
- Unit Assignment Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

SETUP: Check the setup displays.

REINFORCEMENTS: Check the setup displays

SPECIAL SCENARIO RULES:

If not otherwise stated units start "at sea" and "undetected".

VICTORY CONDITION(S):

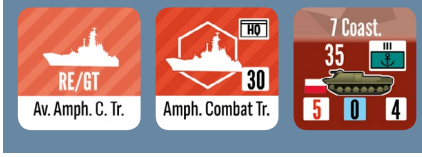
Both missions must be accomplished to win the scenario:

1) Any Polish or USSR surface naval unit must enter any of the coastal hexes of Zealand (Denmark, hex 3726 etc.) to prepare an amphibious landing. These hexes are highlighted on the E5 map.

2) Mine the "Baltic Approaches Sea Zone" to level 2.

VARIANTS:

Replace mission 1) with "Make an amphibious landing in any Danish coastal hex."



Therefore use rule [11.4.2] Combat Transport and add the following WP counters to the start setup:

- "Available Combat Transport (RE/GT)" on space nº 1 of the Transport Track
- "Amphibious Combat Transport" off-map
- Polish ground unit "35th Marine Regiment" in Szczecin port hex 2933

6. NORTH SEA

UNIT COUNTERS: 6 | **SCENARIO LENGTH: 1 GT** | **EXERCISE MAP E6**

BRIEFING

Given the importance of the waterways between the North and the Baltic Sea, NATO is undertaking regular multi-national exercises in that region.

OBJECTIVE OF THIS LEARNING SCENARIO:

There are two things at stake in this scenario. First, the use of aircraft carriers and the possible battles between ships and air units. Furthermore, one learns the CAP rule as well as the reconnaissance and detection rules.

SCENARIO SIZE:

Force Blue (US Navy): 3 air units, 1 naval unit

Force Red (Danish Air Force): 2 air units

SEQUENCE OF PLAY (SOP):

- Unit Assignment Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

SETUP: Check the setup displays.

ERRATA FOR SETUP:

Setup: 3 Air Recon points for WP/Force Red

REINFORCEMENTS: None

SPECIAL SCENARIO RULES:

Use NATO markers for Force Blue, and WP markers for Force Red. The F-16 have the same detection capabilities as the Br.1050 Alizé.

VICTORY CONDITION(S):

At least 1 air unit must enter the hex of the aircraft carrier and makes a successful bombardment.

VARIANTS:

- Do not use the US E-2 aircraft
- Do not use the CAP rule
- Replace the Danish air units with the following:
  - West Germany 1/MFG1 Tornado IDS
  - West Germany 1/JG71 Phantom F-4F

7. RED OCTOBER

UNIT COUNTERS: 20 | SCENARIO LENGTH: 4 GT | STRAT MAP

BRIEFING

The Soviet Union aims to deter the US from using nukes on the battlefields in Germany by putting their submarines equipped with nuclear ballistic missiles so close to the US East Coast that a First Strike becomes a real threat to the US.

OBJECTIVE OF THIS LEARNING SCENARIO:

Hide and seek on the strategic map (StratMap). Detection is key. If it succeeds resolve Air-Naval and Naval-Air combat. Remember that some naval units may use long range missiles and that the AS rating is only used in same hex combat. Missile ranges are expressed in OpHexes, use the rounding rule [1.8]: 5 OpHexes = 1 StratHex. Use the Recce missions before using your long range missiles to cancel the +20 DRM penalty.

SCENARIO SIZE:

NATO: 5 air units, 7 naval units

WP: 2 air units, 6 naval units

SEQUENCE OF PLAY (SOP):

- Asssessing Reinforcements Phase
- Unit Assignment Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

VARIANT: Use optional rule [30.12] SSBN submarines Hiding

SETUP: Check the setup displays.

ERRATA ON SETUP DISPLAY: WP USSR 24 OPLAPDD sets up in Severomorsk and not Pechenga.

REINFORCEMENTS: 1 air reconnaissance mission per GT for each side.

SPECIAL SCENARIO RULES: None

VICTORY CONDITION(S):

WP: Position at least 1 SSBN inside WESTLANT naval zone at the end of a GT.

8. BIRDS AND WOLVES

UNIT COUNTERS: 77 | SCENARIO LENGTH: 5 GT | STRAT MAP

BRIEFING

The epic struggles of the First and Second World War in the North Atlantic go into their third round. This time the Soviets are hunting the Convoys filled with troops and their equipment on their way from America to Europe.

OBJECTIVE OF THIS LEARNING SCENARIO:

Convoys enter the fray, every type of units is hunting them. Can you bring the convoys through to Europe?

SCENARIO SIZE:

NATO: 19 air units, 21 naval units

Warsaw Pact: 17 air units, 20 naval units

SEQUENCE OF PLAY (SOP):

- Asssessing Reinforcements Phase
- Unit Assignment Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

SETUP: Check the setup displays.

REINFORCEMENTS: 2 air reconnaissance missions per GT for each side

SPECIAL SCENARIO RULES: Consider all ADN fully operational.

VICTORY CONDITION(S):

- Sink at least 1 convoy

OR

- Prevent both convoys to reach their destination port in hex D17

9. NORTHERN OIL

UNIT COUNTERS: 9 | SCENARIO LENGTH: 2 GT | EXERCISE MAP E9

BRIEFING
NATOs highly mobile armies need fuel, the WP wants the closest sources to be cut.

OBJECTIVE OF THIS LEARNING SCENARIO:
The Special Forces are now part of your inventory, use them wisely in conjunction with amphibious troops and combat transport.

SCENARIO SIZE:

NATO: 3 installations, 3 naval units

Warsaw Pact: 2 naval units, 1 ground unit, Special Forces, Combat Transport

SEQUENCE OF PLAY (SOP):
- Asssessing Reinforcements Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

SETUP: Check the setup displays.

REINFORCEMENTS: 2 air reconnaissance missions per GT for each side

SPECIAL SCENARIO RULES: Amphibious Combat Transport Marker (off-map) + embarked unit enter any GT in any eastern map edge hex.

VICTORY CONDITION(S):
- at least one successful SF raid on each Oil Rig

AND
- land embarked troops in any coastal hex in Denmark

VARIANT: Land embarked troops in hex 4218, occupied by Danish ground unit LJBG

10. REFORGER

UNIT COUNTERS: 29 | SCENARIO LENGTH: 4 GT | EXERCISE MAP E10

BRIEFING
The REFORGER (return of forces to Germany) exercises were the largest military exercises held in Europe from 1969 to 1993. This scenario is loosely based on Reforger 88 - "Certain Challenge".

OBJECTIVE OF THIS LEARNING SCENARIO:
Back to the heart of Red Strike, the armored troops on the battlefield. Here, larger forces face each other, and it will take several successful battles for Force Gold to reach their objective.

SCENARIO SIZE:

Force Green (NATO): 11 ground units, 2 helicopter units

Force Gold (WP): 10 ground units, 6 helicopter units

SEQUENCE OF PLAY (SOP):
- Initiative Determination Phase
- Asssessing Reinforcements Phase
- Unit Assignment Phase
- First Action Stage
- Second Action Stage
- Third Action Stage
- End Stage

SETUP: Check the setup displays.

REINFORCEMENTS:
- 2 air reconnaissance missions per GT for each side
- Force Gold. On GT2, place in hex 0523.

SPECIAL SCENARIO RULES: Use NATO markers for Force Green and WP markers for Force Gold.

VICTORY CONDITION(S):
Force Gold must cross the Main River with at least 3 REs of combat units

BATTLE SCENARIOS

During the Cold War, the Fulda Gap offered one of the two obvious routes for a hypothetical Soviet tank attack on West Germany from Eastern Europe (especially from East Germany); the other route crossed the North German Plain. The concept of a major tank battle along the Fulda Gap became a predominant element of NATO war planning during the Cold War.

B1. FULDA GAP

UNIT COUNTERS: 176 SCENARIO LENGTH: 3 GT BATTLE MAP B1

BRIEFING

The northern route through the Gap passes south of the Knüllgebirge and then continues around the northern flank of the Vogelsberg Mountains; the narrower southern route passes through the Fliede and Kinzig Valleys, with the Vogelsberg to the north and the Rhön mountains and Spessart mountains to the south. Perhaps even more importantly, on emerging from the western exit of the Gap, one encounters gentle terrain from there to the river Rhine, which would have counted in favour of Soviet attempts to reach and cross the Rhine before NATO could prevent this (the intervening Main River would have been less of an obstacle). The Fulda Gap route was less suitable for mechanized troop movement than was the North German Plain, but offered an avenue of advance direct to the heart of the U.S. military in West Germany, Frankfurt am Main, which was not only West Germany's financial heart, but also home to a large airfield (known as Rhein-Main Air Base and Frankfurt Airport) that was designated to receive U.S. reinforcements in the event of war. Furthermore the West-German seat of government, Bonn, could easily be taken as a secondary objective during or after an attack on Frankfurt through the Fulda Gap, the distance between the two only being some 120 miles (190 km). A rapidly advancing Soviet or Warsaw Pact attack through the Fulda Gap along the lines of Seven Days to the River Rhine could have also potentially cut the territory of West Germany in two parts, making the long-term existence of a West German state untenable.

SCENARIO SIZE:

NATO: 72 ground and helicopter units, 29 air units.

WP: 42 ground and helicopter units, 33 air units.

SEQUENCE OF PLAY (SOP): Complete

SETUP: Check the setup displays

REINFORCEMENTS:

- Check the setup displays
- 1 air reconnaissance mission per GT for each side

OTHER

- The number of CAP is limited to 2 for NATO and 1 for the WP.
- Only ground and helicopter units may move in the pre-GT1 movement phase
- Supply Source hexes : each map-edge hex with a road or railroad exiting the map is a supply source hex. East map-edge hexes for the WP. West and South map-edge hexes for NATO.

Special Scenario rules:

B1.1. Air Defense Networks

NATO ADN: from 4 ATAF only 2 installations are present. Limited with 4 hits and out of service if 6 hits.

WP ADN: LVD 1 (less FuTB-61). Limited with 8 hits and out of service if 12 hits..

B1.2. Pre-GT1

BEFORE THE REGULAR FIRST GT BEGINS:

Both players get an opportunity to **move** all their units on the operational map. **NATO player moves first. The movement allowance for NATO units is halved for this phase. The movement allowance WP units is doubled for this phase.**

- No railroad movement.
- No trespassing of national boundaries
- No combat during this extra turn
- EZOC does not impede movement

The Initiative player rolls 2d10 to determine if he is authorized to use nuclear weapons on GT1. On a roll of 11 (two rolls of "1") the player has the authorization to use nuclear weapons at will for the remainder of the game.

VICTORY CONDITION(S):

Warsaw Pact must establish a bridgehead across the Rhine River between hexes 1415 + 1118. This mission is considered successful if at least 1 assault ground unit "In Supply" on the left bank of the Rhine at the end of GT3.

B2. BERLIN BLOCKADE

UNIT COUNTERS: 236 SCENARIO LENGTH: 4 GT BATTLE MAP B2-B3

BRIEFING

The Berlin Blockade (24 June 1948 – 12 May 1949) was one of the first major international crises of the Cold War. During the multinational occupation of post–World War II Germany, the Soviet Union blocked the Western Allies' railway, road, and canal access to the sectors of Berlin under Western control. The Soviets offered to drop the blockade if the Western Allies withdrew the newly introduced Deutsche Mark from West Berlin. The Western Allies organised the Berlin Airlift (German: Berliner Luftbrücke, lit. "'Berlin Air Bridge"') from 26 June 1948 to 30 September 1949 to carry supplies to the people of West Berlin, a difficult feat given the size of the city and the population.

In August 1989 the WP governments have agreed to again block all access to Berlin as a show of force and to stop the haemorrhage of East European populations escaping to freedom in the West. This time NATO launches a limited military operation to open up the gateways to West Berlin.

SCENARIO SIZE:

NATO: 101 ground and helicopter units, 29 air units

WP: 63 ground and helicopter units, 43 air units

SEQUENCE OF PLAY (SOP): Complete

SETUP: Check the setup displays

ERRATA FOR THE SETUP DISPLAY: WP Setup: Ignore the GDR artillery units "40" called for setup in 2331 and 2430.

REINFORCEMENTS:

- Check the setup displays
- 1 air reconnaissance mission per GT for each side

OTHER

- The number of CAP is limited to 2 for NATO and 1 for the WP.
- Only ground and helicopter units may move in the pre-GT1 movement phase
- Supply Source hexes : each map-edge hex with a road or railroad exiting the map is a supply source hex. East map-edge hexes for the WP. West and South map-edge hexes for NATO.

Special Scenario rules:

B2.1. Air Defense Networks

NATO ADN: 2 ATAF only 3 installations are present. Limited with 6 hits and out of service if 9 hits.

WP ADN: Complete LVD 3. LVD 1, only 3 installations are present. Limited with 6 hits and out of service if 9 hits.

B2.2. Pre-GT1

BEFORE THE REGULAR FIRST GT BEGINS:

Both players get an opportunity to **move** all their units. **WP player moves first.** Full movement allowance may be used.

- No railroad movement.
- No trespassing of national boundaries
- No combat during this extra turn
- EZOC does not impede movement

The Initiative player rolls 2d10 to determine if he is authorized to use nuclear weapons on GT1. On a roll of 11 (two rolls of "1") the player has the authorization to use nuclear weapons at will for the remainder of the game.

VICTORY CONDITION(S):

Trace a supply line from Berlin (hex 2330) to Hamburg or Braunschweig at the end of GT 4 or lose the game.

B3. NORTH GERMAN PLAINS

UNIT COUNTERS: 356 SCENARIO LENGTH: 5 GT BATTLE MAP B2-B3

BRIEFING

The North German Plain or Northern Lowland (German: Norddeutsches Tiefland) is one of the major geographical regions of Germany. It is the German part of the North European Plain. The region is bounded by the coasts of the North Sea and the Baltic Sea to the north, Germany's Central Uplands (die Mittelgebirge) to the south, by the Netherlands to the west and Poland to the east. During the Cold War, should war have broken out between NATO and the Warsaw Pact, NATO military strategists identified the North German plain as an area that could have been used for two of three major invasion routes into Western Europe by Warsaw Pact forces. The third possibility was the Fulda Gap route further south. The North German plain routes were seen as the best attack options for an attacking army. However, the Fulda Gap option was seen as the most likely invasion route because of easier and closer access to tactical and strategic goals important for an invasion of Western Europe. Of the two North German plain invasion options, the southern route of the attack, which had the better strategic opportunities, would have been led by the Soviet Third Shock Army. The plain's geography, which makes it suitable for the deployment of armored and mechanized maneuver, led to it being identified as a major invasion route into West Germany. The defense of the Plain was the responsibility of NATO's Northern Army Group and Second Allied Tactical Air Force, made up of German, Dutch, Belgian, British, and some US forces.

SCENARIO SIZE:

NATO: 135 ground and helicopter units, 41 air units, 10 naval units

WP: 81 ground and helicopter units, 79 air units, 10 naval units

SEQUENCE OF PLAY (SOP): Complete

SETUP: Check the setup displays

REINFORCEMENTS:

- Check the setup displays
- 2 air reconnaissance mission per GT for each side

OTHER

- The number of CAP is limited to 2 for NATO and 1 for the WP.
- Only ground and helicopter units may move in the pre-GT1 movement phase
- Supply Source hexes : each map-edge hex with a road or railroad exiting the map is a supply source hex. East map-edge hexes for the WP. West and South map-edge hexes for NATO.

Special Scenario rules:

B3.1. Air Defense Networks

NATO: 2 ATAF only 3 installations are present. Limited with 6 hits and out of service if 9 hits.

WP: Complete LVD 3. LVD 1, only 3 installations are present. Limited with 6 hits and out of service if 9 hits.

B3.2. Pre-GT1

BEFORE THE REGULAR FIRST GT BEGINS:

Both players get an opportunity to **move** all their units on the operational map. **NATO player moves first. The movement allowance for NATO units is halved for this phase. The movement allowance WP units is doubled for this phase.**

- No railroad movement.
- No trespassing of national boundaries
- No combat during this extra turn
- EZOC does not impede movement

The Initiative player rolls 2d10 to determine if he is authorized to use nuclear weapons on GT1. On a roll of 11 (two rolls of "1") the player has the authorization to use nuclear weapons at will for the remainder of the game.

B3.3. GT1 special rules

NATO ground units may NOT enter "deliberate defense" combat formation due to problematic routing to the frontline of ammunitions and supply in general.

WP artillery combat support is given a +5 DRM instead of the +3 DRM, due to the high concentration of towed artillery trained to support the first onslaught. However, the towed artillery is slow and very vulnerable to counter-battery fire, which means the +5 modifier is only applied on the first turn.

B3.4. West-Berlin

Units in 2329 and 2330 do not move or fight in this scenario. NATO units in West-Berlin do not exert a ZOC.

VICTORY CONDITION(S):

Establish a bridgehead across the Weser River north of hex row 22xx. Successful if at least 1 assault ground unit "In Supply" is on the left bank of the Weser River at the end of GT3 **and** control of hex 2821 Hamburg Port.

B3.5. Air base displays

East German Sperenberg AB : do not use this air base.

You have to use the air base displays for those air bases that did not fit on the map.

GUIDELINE TO SETUP AIR UNITS:

NATO

Use the air base displays:

OpMap Sheet 3

StratMap Sheet 3

Use Wattisham air base as replacement for Wildenrath.

Use Marham air base as replacement for RNAS Portland in hex D17 for the UK Air 829/815.

Air units stationed on the off-map air base displays enter the OpMap as follows:

- COLTISHALL and LAKENHEATH: any hex between 2011 and 3011 (inclusive) having spent 20 MPs.
- WILDENRATH: any hex between 2011 and 2016 (inclusive).

WP

Use the air base display:

StratMap Sheet 1

Air units stationed on the off-map air base displays enter the OpMap as follows:

- BALTIC MD / BALTIC FLEET: any hex between 3430 and 3432 or 3333 and 2632 (inclusive) having spent 25 MPs
- EAST: any hex between 3432 and 2032 (inclusive) having spent 45 MPs.

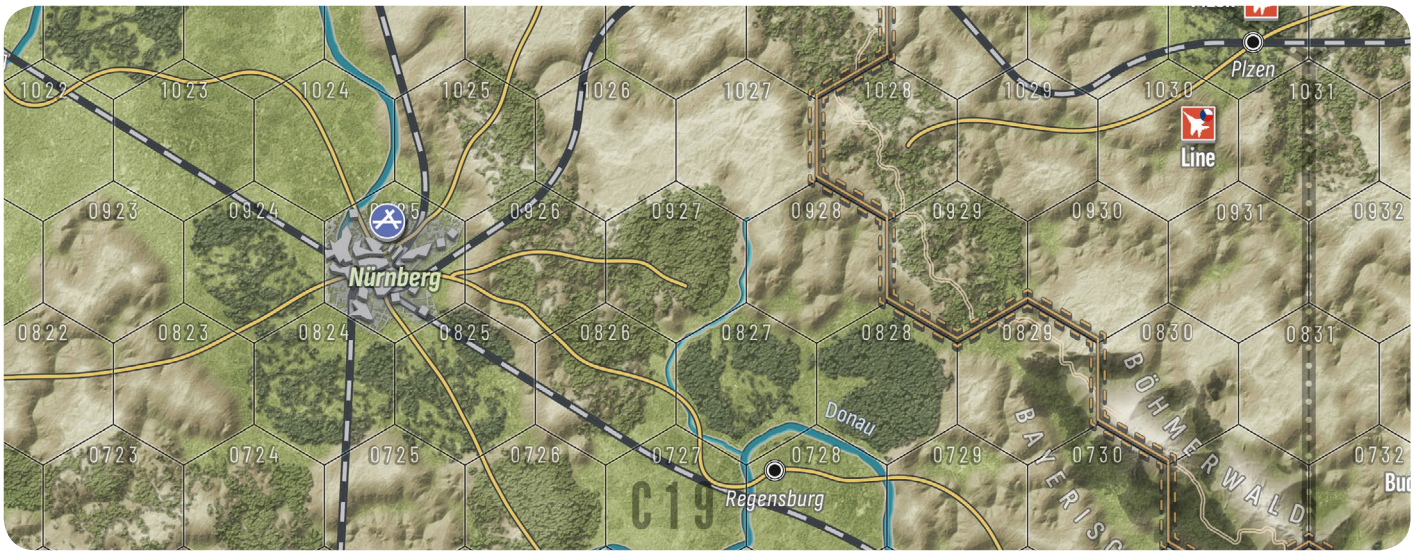
Add the Soviet Western Front HQ to the set up, in hex 2231. HQ Netherlands 1st Corps + 105th Brigade set up in hex 2213, not in 2211.

Reinforcements : those to enter in hex 2211 enter in hex 2213.

Naval units that don't start the game in a port hex are set up "at sea" and undetected.



B4. BAVARIAN OPTION

UNIT COUNTERS: 137 SCENARIO LENGTH: 5 GT BATTLE MAP B4

BRIEFING

Tensions between NATO and the Warsaw Pact have been mounting for years. In 1989, the situation reaches a boiling point when Warsaw Pact forces, led by the Soviet Union, launch a surprise invasion of Bavaria, a state in southern Germany.

The invasion is swift and brutal. The Warsaw Pact forces quickly overwhelm the German defenses and seize control of major cities and strategic locations throughout Bavaria. The German military is caught off guard and is unable to mount an effective counterattack.

As news of the invasion spreads, NATO forces mobilize and begin to deploy to the region. France and the United States send large numbers of troops and military equipment to Germany in support of its NATO allies.

The fighting intensifies as NATO forces engage the Warsaw Pact troops in a series of fierce battles.

SCENARIO SIZE:

NATO: 40 ground and helicopter units, 20 air units

WP: 50 ground and helicopter units, 27 air units

SEQUENCE OF PLAY (SOP): Complete

SETUP: Check the setup displays

ERRATA ON SETUP DISPLAYS: WG unit to set up in 0530 should be 0629. West German reinforcements on GT3: The 64. Territorialheer Tank Brigade should arrive in hex 0521. The 84. Territorialheer Mechanized Brigade should arrive in hex 0924.

REINFORCEMENTS: Check the setup displays
1 air reconnaissance mission per GT for each side

OTHER:

- The number of CAP is limited to 2 for NATO and 1 for the WP.
- Only ground and helicopter units may move in the pre-GT1 movement phase
- Supply Source hexes : each map-edge hex with a road or railroad exiting the map is a supply source hex. East map-edge hexes for the WP. West and South map-edge hexes for NATO.

Special Scenario Rules:

B4.1. Air Defense Networks

NATO ADN: 4 ATAF, 3 installations are present. Limited with 6 hits and out of service if 9 hits.

WP ADN: CSSR, 3 installations are present. Limited with 6 hits and out of service if 9 hits.

B4.2. Pre-GT1

BEFORE THE REGULAR FIRST GT BEGINS:
WP player gets an opportunity to **move** all his units. **The movement allowance of all WP units is doubled for this phase. NATO player does not move or react in any way.**

- No railroad movement.
- No trespassing of national boundaries
- No combat during this extra turn
- EZOC does not impede movement

The Initiative player rolls 2d10 to determine if he is authorized to use nuclear weapons on GT1. On a roll of 11 (two rolls of "1") the player has the authorization to use nuclear weapons at will for the remainder of the game.

B4.3. Setup and air missions

Ignore hex locations on ADN counters, use the hex setup of the scenario instructions instead

Ignore air base nation rule *[26.3.] Air Base operations*

VICTORY CONDITION(S):

Warsaw Pact must control Munich and Augsburg during the end stage of any GT and trace a valid supply line to immediately win the scenario.

OPTIONAL FRENCH INTERVENTION: ADD THE FOLLOWING FRENCH UNITS TO THE SETUP:

REINFORCEMENTS ON GT2: FAR HQ, 6e DLB, 9e DM, 27e DA in any map edge hex between 0219 and 0822. 1e DB in hex 0924

REINFORCEMENTS ON GT3: 3e DB hex 0521, 5e DB hex 0822

B5. MIAMI 1989

UNIT COUNTERS: 57 | SCENARIO LENGTH: 6 GT | STRATMAP

BRIEFING

In 1989, the Soviet Union orders its SSBN (nuclear-armed submarines) to leave their home ports and go into hiding in the Arctic Bastion, a network of underwater caves and tunnels located beneath the Arctic ice cap.

The Soviet move catches the United States off guard. American intelligence agencies had been monitoring the Soviet SSBN fleet for years and had no indication that the submarines were planning to leave their home ports. The sudden disappearance of the Soviet submarines raises alarm bells in Washington, and the U.S. military is placed on high alert.

As the Soviet submarines move northwards, American and NATO forces begin a massive surveillance operation in the Arctic. NATO deploys a fleet of submarines and surface ships to patrol the area, while its planes conduct aerial surveillance missions.

The U.S. military is worrying that the Soviet Union may be planning a surprise attack and receives the order to deny the Soviet subs access to the ice cap, by all means.

SCENARIO SIZE:

NATO: 14 naval, 15 air units.

WP: 15 naval units, 13 air units.

SEQUENCE OF PLAY (SOP): Complete

SETUP: Check the setup displays

REINFORCEMENTS:

- Check the setup displays
- 1 air reconnaissance mission per GT for each side

OTHER:

- The number of CAP is limited to 2 for NATO and 1 for the WP.
- Only ground and helicopter units may move in the pre-GT1 movement phase
- Supply Source hexes : each map-edge hex with a road or railroad exiting the map is a supply source hex. East map-edge hexes for the WP. West and South map-edge hexes for NATO.

Special Scenario rules:

B5.1. Pre-GT1

There is no pre-GT1 turn.

B5.2. GT1 special rules

Soviet SSBN units are the only units allowed to exit the map, through hex Q18 by spending 30 MPs.

B5.3. Mandatory Optional rule

[30.7] In-Flight refueling is mandatory

VICTORY CONDITION(S):

Warsaw Pact must move his SSBNs into the Arctic Bastion and gains/loses victory points (VP) as follows:

US CV sunk:	+10 VP
Each Soviet SSBN exiting the map:	+7 VP
Each hit on a NATO naval or air unit:	+2 VP
Soviet CV sunk:	-2 VP
Each hit on a Soviet naval or air unit:	-1 VP

At the end of the game the WP player sums up his VPs and checks the level of his victory, or not:

Dominant victory	> 25 points
Strategic victory	19 - 25 points
Tactical victory	13 - 24 points
NATO victory	< 13 points

B6. VALKYRIE'S EMBRACE

UNIT COUNTERS: 82 SCENARIO LENGTH: 6 GT STRATMAP

BRIEFING

As the Soviet invasion of Norway continues, Stavka devises a plan to launch a major interdiction effort against NATO's North Atlantic shipping lanes. Recognizing the importance of cutting off NATO's supply lines and weakening their maritime capabilities, they set their sights on disrupting the flow of resources and reinforcements to the alliance. The Soviet naval forces employ various tactics, including submarine operations, surface vessel patrols, and air reconnaissance, to locate and intercept NATO convoys.

In response, NATO allies quickly assess the gravity of the situation and rally their forces to counter the Soviet interdiction efforts. They coordinate their efforts to create convoy systems, deploying a combination of naval escorts, anti-submarine warfare assets, and maritime patrol aircraft, and conduct aerial surveillance to detect any hostile activities and safeguard its shipping lanes.

As the conflict escalates, both sides engage in a fierce struggle for control over the North Atlantic. Naval skirmishes, submarine hunts, and aerial dogfights become a regular occurrence, with each side attempting to gain the upper hand in this vital battleground.

Meanwhile, on the ground in Norway, NATO forces mount a determined defense against the advancing Soviet troops. Recognizing the significance of holding key positions and denying the Soviets full control over Norwegian territory, NATO implements defensive strategies, fortified positions, and conducts counteroffensives to push back against the invading forces.

SCENARIO SIZE:

NATO: 22 naval, 21 air units.

WP: 18 naval units, 21 air units.

SEQUENCE OF PLAY (SOP): Complete

SETUP: Check the setup displays

REINFORCEMENTS: Check the setup displays
1 air reconnaissance mission per GT for each side

OTHER

- The number of CAP is limited to 2 for NATO and 1 for the WP.

Special Scenario Rules:

THIS SCENARIO MUST BE PLAYED WITH THE ADVANCED GAME RULES!

B6.1. Pre-GT1

There is no pre-GT1 turn.

B6.2. Mandatory Optional rule

[30.7] In-Flight refueling is mandatory

B6.3. Markers

Place the FEBA marker in hex O21 and WP control markers in the hexes P21, P22 and P23.

VICTORY CONDITION(S):

Warsaw Pact gains/loses victory points (VP) as follows:

US CV sunk:	+ 7 VP
Each Convoy sunk:	+ 3 VP
Each Soviet SS or SSN ending the game south of the SOSUS line :	+ 2 VP
Each hit on a NATO naval or air unit or installation:	+ 2 VP
FEBA marker as per rule *[25.] NORWAY – FEBA*:	+ 1 VP
Each Convoy reaching any port in Norway:	- 3 VP
Each Convoy reaching any port in France or the UK:	- 2 VP
Soviet CV sunk:	- 2 VP
Each hit on a WP naval or air unit or installation:	- 1 VP

At the end of the game the WP player sums up his VPs and checks the level of his victory, or not:

Dominant victory	> 25 points
Strategic victory	19 - 25 points
Tactical victory	13 - 24 points difference
NATO victory	< 13 points difference

CAMPAIGN SCENARIOS

C1. 99 RED BALLOONS

UNIT COUNTERS: 1240 | SCENARIO LENGTH: 15 GT | OPMAP & STRATMAP

Out of the barracks surprise attack of WP on August 1st. No major preparations have been made on both sides of the Iron Curtain. WP attacks.

BRIEFING

On August 1st, an unexpected attack by the Warsaw Pact caught NATO forces off-guard. The attack was launched without any major preparations being made on both sides of the Iron Curtain, leading to an initial advantage for the attacking force.

The attack was launched out of the barracks, which allowed the Warsaw Pact forces to quickly and efficiently mobilize and launch an assault on NATO positions. NATO forces were caught by surprise, leading to significant losses and the potential for further territorial gains by the Warsaw Pact.

The exact objective of the attack is currently unknown, but it is believed that the Warsaw Pact may be aiming to quickly gain territory and establish strategic positions in the early stages of the conflict. NATO forces are currently in the process of mobilizing and mounting a counterattack.

It is crucial that NATO forces respond quickly and efficiently to this surprise attack to prevent further territorial gains by the Warsaw Pact. Military commanders must remain vigilant and act decisively to protect NATO interests and ensure the safety of civilian populations.

The situation remains fluid, and further updates will be provided as more information becomes available. All NATO forces are advised to maintain a high level of readiness and remain prepared for any further developments in the conflict.

SCENARIO SIZE:

NATO	Ground units	302
	Air units	342
	Naval units	69
	Total:	713
WP	Ground units	209
	Air units	280
	Naval units	38
	Total:	527

SEQUENCE OF PLAY (SOP): Complete

SETUP: Check the setup displays

REINFORCEMENTS: Check the setup displays

- NATO player receives 2 Reconnaissance Air Missions on each GT 2, 3, and 4
- WP player receives 3 Reconnaissance Air Missions on each GT 2 and 3

Special Scenario Rules:

C1.1. Pre-GT1

BEFORE THE REGULAR FIRST GT BEGINS:

WP player gets an opportunity to **move** all his units on the operational (and strategic maps Advanced Game only). **NATO player does not move or react in any way.** The **movement allowance of all WP units is halved** for this phase.

- No railroad movement
- French units may not move
- German units of the 1. Mountain Division (1G) may not move
- NATO AMF (Allied Mobile Force) units may not move
- No trespassing of national boundaries
- No combat during this extra turn
- EZOC does not impede movement. During the pre-GT1 movement ZOCs are not in effect!

The Initiative player rolls 2d10 to determine if he is authorized to use nuclear weapons on GT 1. On a roll of 11 (two rolls of "1") the player has the authorization to use nuclear weapons at will for the remainder of the game.

C1.2. GT1 special rules

- NATO ground units may NOT enter "deliberate defense" combat formation due to problematic routing to the frontline of ammunitions and supply in general.
- WP artillery combat support is given a +5 DRM instead of the +3 DRM, due to the high concentration of towed artillery trained to support the first onslaught. However, the towed artillery is slow and very vulnerable to counterbattery fire, which means the +5 modifier is only applied on the first turn.

C1.2.1 Supply points per GT

Check player aid for Supply points per GT table.

VICTORY CONDITION(S):

As per Victory Conditions rule [20]

Dominant victory	> 50 points
Strategic victory	31 - 50 points
Tactical victory	11 - 30 points difference
Marginal victory	< 11 points difference

C1.3. Determination of the number of naval movements

Each AS:

1) Roll 1d10. The result is the number of naval units that may move on the StratMap in that AS.

2) Roll 1d10. The result divided by 2 is the number of naval units that may move on the OpMap in that AS.

ERRATA FOR SETUP DISPLAY:

The following US units should start in their setup hexes as stipulated in the C2,C3, and C4 setup and not as reinforcements in GT3: US 8ID, US 3ID, US 2 ACR.

Add these units to the setup in Keflavik, Iceland:

1x E-3A Sentry EWDA/AWACS

US 57th TFS F-15C/D

WP General Setup refers to AB „Olomouc" instead of „Group 4".

WP Setup & Reinforcements 3/3

From GT20, all GT should be -10, so GT21 = GT11 and GT43 = GT33

WP submarine units show that they set up in the Arctic Holding Box, they should be set up in the Bastion Holding Box.

Setup all installations of both sides in the hexes printed on the respective counters.

Setup of the FEBA marker in hex P23.

C2. WE DIDN'T START THE FIRE

UNIT COUNTERS: 1240 | SCENARIO LENGTH: 15 GT | OPMAP & STRATMAP

After a short period of rising tensions which lead to war, giving the 2 sides some time to mobilize before WP launches its all-out offensive.

BRIEFING

Over the past few weeks, tensions between NATO and the Warsaw Pact have been rapidly escalating, with both sides increasing their military presence along the borders. On August 1st, the situation reached a critical point when the Warsaw Pact launched an all-out offensive against NATO forces.

Both sides had mobilized their forces in response to the escalating tensions, and as a result, the initial stages of the conflict have been intense and devastating. The exact objectives of the Warsaw Pact are not yet clear, but they appear to be aiming for a swift and decisive victory over NATO forces.

NATO forces have been caught off-guard by the sudden attack, but they are mobilizing and mounting a counteroffensive. The situation is extremely fluid, with rapid changes on both sides, making it challenging to accurately assess the situation.

It is essential that all NATO forces remain vigilant and act decisively to protect their interests and ensure the safety of civilians. Military commanders must make quick and informed decisions to respond to the constantly changing situation on the battlefield.

The conflict is expected to be long and brutal, with devastating consequences for all involved. It is crucial that all sides exercise restraint and avoid any actions that could escalate the situation further.

Further updates will be provided as the situation develops, but all NATO forces are advised to remain on high alert and prepare for further engagements with the Warsaw Pact.

SCENARIO SIZE:

NATO	Ground units	302
	Air units	342
	Naval units	69
	Total:	713
WP	Ground units	209
	Air units	280
	Naval units	38
	Total:	527

SEQUENCE OF PLAY (SOP): Complete

SETUP: Check the setup displays

REINFORCEMENTS: Check the setup displays

- NATO player receives 2 Reconnaissance Air Missions on each GT 2, 3, and 4
- WP player receives 3 Reconnaissance Air Missions on each GT 2 and 3

Special Scenario Rules:

C2.1. Pre-GT1

BEFORE THE REGULAR FIRST GT BEGINS:

Both players get an opportunity to **move** all of their units on the operational (and strategic maps Advanced Game only). **NATO player moves first. The movement allowance of all units is halved for this phase.**

- No railroad movement
- French units may not move
- German units of the 1. Mountain Division (1G) may not move
- NATO AMF (Allied Mobile Force) units may not move
- No trespassing of national boundaries
- No combat during this extra turn
- EZOC does not impede movement. During the pre-GT1 movement ZOCs are not in effect!

The Initiative player rolls 2d10 to determine if he is authorized to use nuclear weapons on GT 1. On a roll of 11 (two rolls of "1") the player has the authorization to use nuclear weapons at will for the remainder of the game.

C2.2. GT1 special rules

- NATO ground units may NOT enter "deliberate defense" combat formation due to problematic routing to the frontline of ammunitions and supply in general.
- WP artillery combat support is given a +5 DRM instead of the +3 DRM, due to the high concentration of towed artillery trained to support the first onslaught. However, the towed artillery is slow and very vulnerable to counterbattery fire, which means the +5 modifier is only applied on the first turn.

C2.2.1 Supply points per GT

Check player aid for Supply points per GT table.

VICTORY CONDITION(S):

As per Victory Conditions rule [20]

Dominant victory	> 50 points
Strategic victory	31 - 50 points
Tactical victory	11 - 30 points difference
Marginal victory	< 11 points difference

C2.3. Determination of the number of naval movements

Each AS:

1) Roll 1d10. The result is the number of naval units that may move on the StratMap in that AS.

2) Roll 1d10. The result divided by 2 is the number of naval units that may move on the OpMap in that AS.

C3. LAND OF CONFUSION

UNIT COUNTERS: 1240 | SCENARIO LENGTH: 15 GT | OPMAP & STRATMAP

A prolonged period of Sabre rattling and mobilization undermines diplomatic efforts and leads to "continuation of politics by other means". War is breaking out after mobilization. WP attacks.

BRIEFING:

Despite diplomatic efforts to ease tensions between NATO and the Warsaw Pact, a prolonged period of sabre rattling and mobilization has led to a continuation of politics by other means. On August 1st, the Warsaw Pact launched an all-out offensive against NATO forces, leading to the outbreak of World War 3.

The Warsaw Pact had been amassing troops and weapons along the border for weeks, causing NATO to increase their military presence in response.

Despite efforts by both sides to de-escalate the situation, the continued build-up of military forces made it clear that a conflict was inevitable. The Warsaw Pact launched an all-out offensive against NATO forces, with the aim of quickly gaining territory and establishing a strategic foothold in the early stages of the conflict.

NATO forces were initially caught off-guard by the sudden attack, but they quickly mobilized and mounted a counter-offensive. The conflict is expected to be long and brutal, with devastating consequences for all involved.

SCENARIO SIZE:

NATO Setup & Reinforcements 4/4

GT 17 should be GT 7

Add these units to the setup in Keflavik, Iceland:

1x E-3A Sentry EWDA/AWACS

US 57th TFS F-15C/D

WP Setup & Reinforcements 2/3

The Polish 2 MRD of the 2 CAA is appearing twice, use only the "B" category at the start of the scenario. That Division may upgrade to "A" category in GT5.

WP Setup & Reinforcements 3/3

From GT20, all GT should be -10, so GT21 = GT11 and GT43 = GT33

WP submarine units show that they set up in the Arctic Holding Box, they should be set up in the Bastion Holding Box.

WP General Setup refers to AB „Olomouc" instead of „Group 4".

Setup all installations of both sides in the hexes printed on the respective counters.

Setup of the FEBA marker in hex P23.

C4. TWO TRIBES

UNIT COUNTERS: 1240 | SCENARIO LENGTH: 15 GT | OPMAP & STRATMAP

A prolonged period of Sabre rattling and mobilization undermines diplomatic efforts and leads to "continuation of politics by other means". NATO attacks.

BRIEFING:

Over the past several months, diplomatic efforts to ease tensions between NATO and the Warsaw Pact had been undermined by a prolonged period of sabre rattling and mobilization on both sides of the Iron Curtain. This had severely undermined diplomatic efforts, leading to a breakdown in negotiations between NATO and the Warsaw Pact. Both sides had been amassing troops and weapons along the border, causing an escalation in tensions and heightening the risk of conflict.

In a dramatic turn of events, NATO forces decided to take preemptive action against the Warsaw Pact, launching an all-out offensive on August 1st, leading to the outbreak of World War 3. The objectives of the NATO attack are to neutralize Warsaw Pact military capabilities and gain a strategic advantage in the early stages of the conflict.

The sudden NATO attack caught the Warsaw Pact forces off-guard, giving NATO an initial advantage. However, the conflict is expected to be long and brutal, with devastating consequences for all involved.

SCENARIO SIZE:

NATO	Ground units	302
	Air units	342
	Naval units	69

Setup of the FEBA marker in hex P23.

RULES EXAMPLES

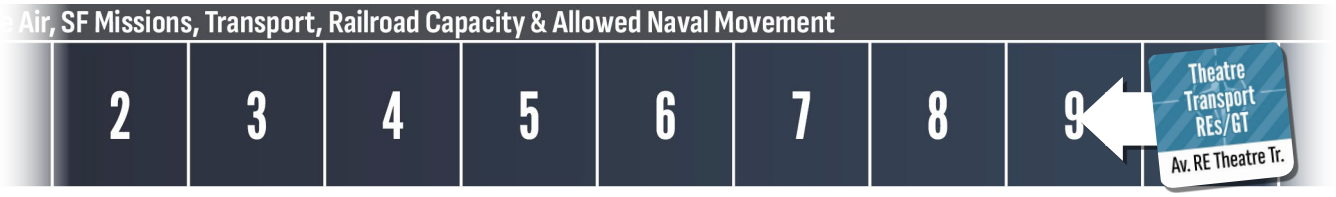
11.1.2. Repulse

SITREP

In the Movement Phase, the Polish 12th Motorized Rifle Division (MRD) enters the hex adjacent to the Luxembourgish Infantry Battalion. When their combat values are compared the 12 MRD has a 14-1 odds advantage over the Infantry Battalion, so it MUST retreat 1 hex. The Poles pay only the normal movement cost to enter the now vacant hex. If they have enough movement points left, they may continue to move but not repulse again.

11.4.1 Theatre Transport

The Scenario Special Rules (SSR) stipulate for both players the maximum number of regimental equivalents (REs) they may move per GT.



How many REs they may still move during the current GT is shown with the marker "Theatre Transport REs / GT". Move this marker one space down the track for each RE moved using theatre transport. This marker is reset during the End Stage to the maximum as per SSR.

HOW DOES THEATRE TRANSPORT WORK?

Example: Moving the 15th Bde of the 2nd British Division from England to Germany.
A Brigade counts for 1 RE, so the "Theatre Transport REs / GT" marker is moved 1 space towards 0. If the marker had already been in the 0 space, this transport could not have been done.

The unit had to be in the hex of an air base / airport or port at the start of the movement phase it is eligible to move in, (given the mode in which it is). It must move to a friendly air base/airport or port.

In this example the Brigade was already occupying the hex of Coltishall AB.

To move the unit from Coltishall AB to Hopsten AB, simply pick it up and put it on the OpMap in the hex of Hopsten AB.

This is not traced on the map and may not be intercepted.

11.4.2 Combat Transport

Airmobile/Paradrop transport by air [16.4.3.4] / Amphibious transport by sea into a coastal hex [17.10] / Screening Force [17.9] / Raids [16.4.2]

SITREP

The Scenario briefing specifies the number of REs that may be transported using Combat Transport:

COMBAT TRANSPORT CAPACITY GT & GAME:

Amphibious Combat Transport	Airmobile / Paradrop Combat Transport
6 RE	3 RE

The corresponding markers on the General Track:

In this example taken from the Battle Scenario 3 – North German Plains the WP launches a threefold combat transport operation to take Kiel, destroy a missile unit and attack the HQ of the West German 6th Panzergrenadier Division.

HOW DOES AMPHIBIOUS COMBAT TRANSPORT WORK?

The units of the Polish 7th Coastal Division are in a port hex and number 3 ½ RE. We place the "Amphibious Combat Transport" Marker on the stack and move the unit to hex 3222 tracing a seapath through all-sea and coastal hexes. This move could have been intercepted by enemy air and naval units. Therefore it was escorted by a Polish Surface Action Group (SAG).

The destination hex is not a clear hex and unoccupied by enemy units.
The Polish units land uncontested but may not move again in this game turn.

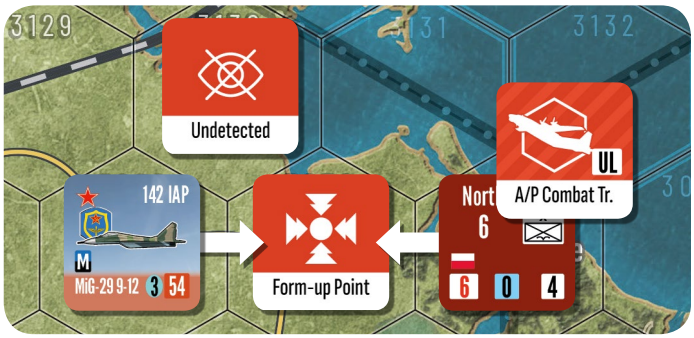
Move the "Available Amphibious Combat Transport RE/GT" marker 4 spaces towards 0 to take into account that 3 ½ REs have been moved.

HOW DOES AIRMOBILE/PARADROP COMBAT TRANSPORT WORK?

With Aircraft

The Polish 6th Pomorska Airborne Brigade stationed at the Peenemünde air base in hex 3031 is marked with the A/P Combat Tr. Marker with the aircraft symbol. Combat Transport with aircraft has the advantage of unlimited range but may be detected and intercepted. In this example the helicopter transport would have been the better option as the target hex is in the 10 hex range of heli transport, but I want to show how to escort this transport. There are MiG-27 air units in offensive mode on the Damgarten air base in hex 3128. The Raids rule [16.4.2.] comes now into effect: placing a "Form-Up" point marker is put in hex 3030 and both air units are moved there to join. All units are still undetected.

Both counters move and fight together from this point on.



The stack is now composed of the transport aircraft and the MiG-29 on anti-air mission to escort them.

Once arriving in the target hex 3123 (terrain: clear and no enemy units) the outcome of the operation is rolled for with 1d10 while applying eventual modifiers:

Die Roll (1d10)	Result
≤1-5	Successful. Place unit in hex.
6-8	Successful. Gain one Hit. Place unit in hex.
≥9	Unit Eliminated

Die Roll Modifiers			
if unit transported by helicopters	-1	If unit drops in rough	+2
If unit drops in clear	-1	if destination hex in EZOC	+1

In this example only the -1 DRM for the clear terrain in the destination hex would be applied.

Move the "Av. A/P Combat Tr RE/GT" marker 1 space towards 0 to take into account that 1 RE has been moved.

The Polish Brigade could now move half of its movement allowance.

With helicopters

The East German "Luftsturmregiment 40 "Willi Sänger", LStR-40" boards transport helicopters at Parow air base in hex 3229 and flies undetected to their drop zone in hex 3122. Heli transport may be detected, intercepted, and undergo anti-air fire. It may never exceed a distance of 10 hexes.

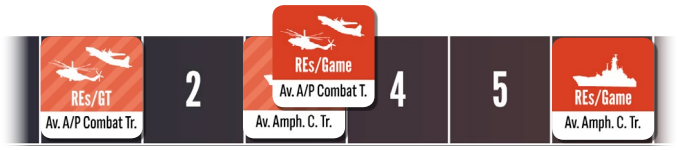
On arrival in their destination hex, the outcome of the operation is rolled for with 1d10 while applying eventual modifiers, same table as for aircraft, (see above).

In this example there would be a -2 DRM, one for the clear terrain in the target hex and one for the use of helicopters.

Move the "Av. A/P Combat Tr RE/GT" marker 1 space towards 0 to take into account that 1 RE has been moved.

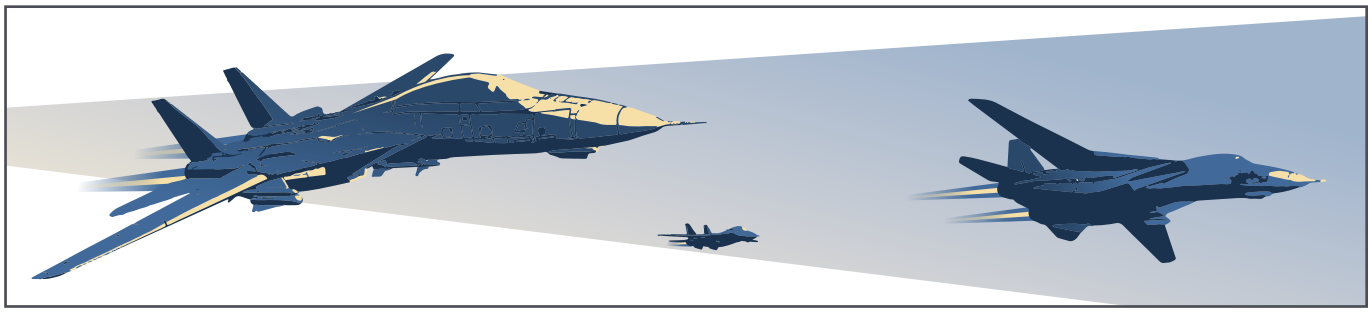
The German Regiment could now move half of its movement allowance.

The situation on the General Track after these operations:



The WP player has not lost any of its assets so the Available REs/Game markers have not moved and during the End Phase the Available REs/GT markers will be reset to 3 and 6.

For this GT he may still undertake 1 RE of airmobile/paradrop and 3 REs of amphibious transport.



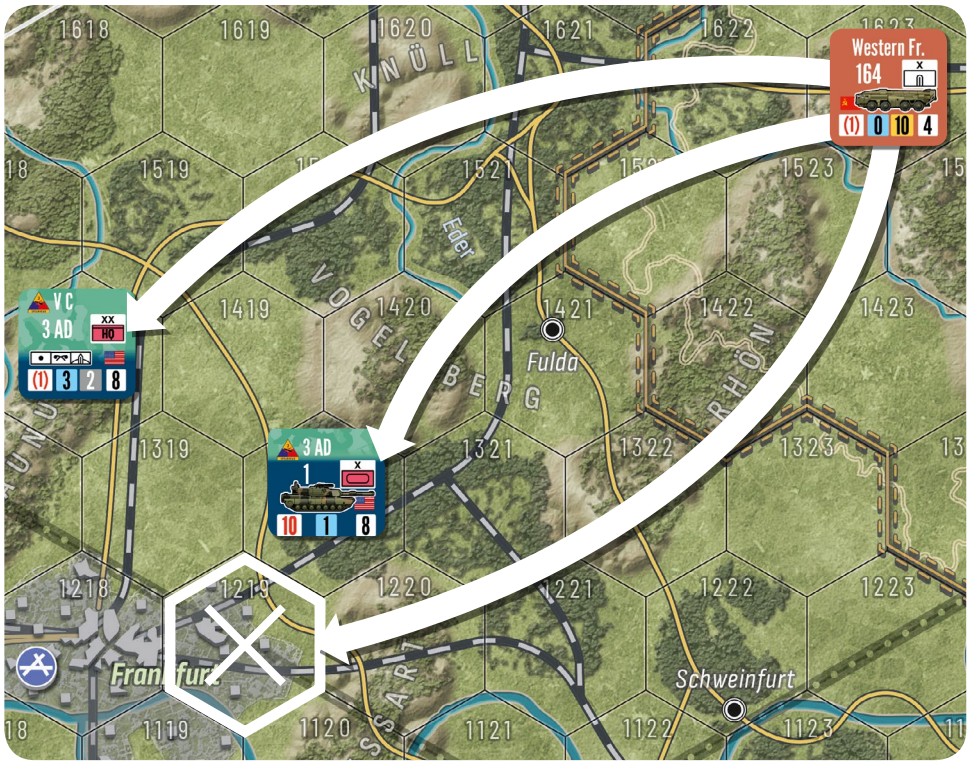
15.1.4 Long Range Missile Units

11.1.3 Interdiction / 15.1.4 LRMU / 16.4.3.16. Reconnaissance Air Mission / Missile Table / Optional Rule 31.8 Patriot ABM

THE MISSION

The Soviet 164th Missile Brigade equipped with SS-1C missiles has three objectives:

- Hit the US armored unit in hex 1320
- Hit the US HQ in hex 1418
- Interdict the hex 1219



WHAT INFORMATIONS ARE ON THE COUNTER?

This unit is under the direct command of the Western Front.

It has a defensive combat factor of 1, but in brackets which means it is ignored if assault units are present in the same hex when attacked.

The anti-air rating is 0, but if it is attacked a -1DRM will be applied due to close air defense of WP units.

The range is 10 hexes and the yellow box indicates that the unit may use nuclear warheads.

The Movement Allowance is 4. Mobile units are given a lower movement rate than other vehicles to allow for the time it takes to set up and launch missiles.

The type of missile used by the LRMU is on the back of the counter. In this case a SS-1C.

Each surface-to-surface missile (LRMU) unit has three shots that may be used in the same game turn and even the same segment. After the third shot the unit has no more missiles in stock and is out of the game.

Note: Optional rule [30.19] Ground Launched Missile Stocks

HOW DOES IT WORK FOR THE HQ TARGET?

1. Check if the target is in range. Each Missile unit has a range specified on the counter (black number in yellow box) and on the Missile Table. If the target is in range, a missile strike is conducted.
   → **In range**
2. The target type is specified on the missile table.
   → **HQ, so we are using the rightmost columns on the missile table**

Full Hex city, Dot City, Port	Airbase & Airport	Assault ground unit, Nuclear Facility, Oil Terminal, POMCUS	HQ, ADN, LRMU, Oil Rig, Supply Line, Interdiction
High Explosive			

3. The player declares the warhead type: High Explosive (HE), Chemical (CH) or Nuclear (Small, Medium or Massive), if the unit is eligible as per the Missiles Table.
   → **Checking the SS-1c row of the table we find out the following informations:**

System	NATO Code Sign	Launch Platform	Range (OP hex)	Target
R-17 Aerofan	SS-1c Scud-B	Ground-Ground	10	Ground

Warheads available are nuclear (small) (N(S)), chemical (CH) and high explosive (HE). Warheads probability of success and number of hits:

Nuclear	Chemical	HQ, ADN, LRMU, Oil Rig, Supply Line, Interdiction
		High Explosive
Small	AV	53

53% probability to inflict 1 hit with HE warhead. 100% probability to inflict 2 hits with CH warhead. 100% probability to inflict 4 hits with N(S) warhead
M and X size nukes not possible

Warhead	Hits	Warhead	Hits
HE, high explosive	1	N, nuclear - small, +- 50kT	4
		N, nuclear - medium, +- 500kT	7
CH, chemical	2	N, nuclear - massive, > 1MT	10

4. Roll 1d100. If the modified die roll is equal to or less than the warhead's hit number then a hit occurs. Depending on the warhead type chosen, combat units and strategic targets take hits or may be destroyed by nuclear attack.
   → **WP player chooses to use HE warheads and rolls against the 32 probability. However, missile strikes against naval or ground units (including LRMU and HQs; excluding installations) that have not been reconnoitred suffer a +20 DRM to their d100 roll. This means the WP must roll 12 or less on a 1d100 to hit. The WP player should probably have used reconnaissance air or special forces mission to reconnoitre the target before the missile strike to avoid this. A nuclear warhead would have been a "sure hit" (denoted by a tick on the Missile Table) and would have destroyed the HQ in one strike.**
   Important: "Sure hits" do not receive this +20 DRM as they are considered to hit their target 100% of the time
   (Remember: Reconnaissance and Detection are different game mechanics)

HOW DOES IT WORK FOR THE ARMORED BRIGADE TARGET?

1. Check if the target is in range. Each Missile unit has a range specified on the counter (black number in yellow box) and on the Missile Table. If the target is in range, a missile strike is conducted.
   → **In range**
2. The target type is specified on the missile table.
   → **Assault ground unit, so we are using those columns on the missile table which are slightly more favorable to the attacker:**

Full Hex city, Dot City, Port	Airbase & Airport	Assault ground unit, Nuclear Facility, Oil Terminal, POMCUS	HQ, ADN, LRMU, Oil Rig, Supply Line, Interdiction
High Explosive			

3. The player declares the warhead type: High Explosive (HE), Chemical (CH) or Nuclear (Small, Medium or Massive), if the unit is eligible as per the Missiles Table.
   → **Checking the SS-1c row of the table we find out the following informations:**

R-17 Aerofan	SS-1c Scud-B	Ground-Ground	10	Ground

Warheads available are nuclear (small) (N(S)), chemical (CH) and high explosive (HE). Warheads probability of success and number of hits:
71% probability to inflict 1 hit with HE warhead. 100% probability to inflict 2 hits with CH warhead. 100% probability to inflict 4 hits with N(S) warhead

Nuclear	Chemical	Assault ground unit, Nuclear Facility, Oil Terminal, POMCUS
		High Explosive
Small	AV	71

4. Roll 1d100. If the modified die roll is equal to or less than the warhead's hit number then a hit occurs. Depending on the warhead type chosen, combat units and strategic targets take hits or may be destroyed by nuclear attack.

→ **WP player chooses to use HE warheads and launches a successful air reconnaissance mission before the missile strike. As the target was reconnoitred the +20 DRM is not applied. The 1d100 roll against 43 is still not great but worth a shot. A roll of 31 is making the strike a success. The hit on the armored unit is shown by placing a 1 hit marker under the ground unit. Remember: hits from air or missiles strikes do not flip ground units.**
A nuclear warhead would have been a sure hit and four hits would have been applied in one strike. Nuclear attacks have an impact on World Opinion, DEFCON and eventually on Victory Points. *[18.2] Nuclear Warfare*

Missile strikes against naval or ground units (including LRMU and HQs; excluding installations) that have not been reconnoitered suffer a +20 DRM on 1d100 roll. "Sure" hits are not modified. (Remember: Reconnaissance and Detection are different game mechanics)

When using the advanced rule 26.4 Patriot ABM (anti-ballistic missile), the armored brigade would have rolled 1d10 before the strike would have rolled 1d100 for its effect. On a roll of >3 the missiles have been intercepted and no damage caused to the target.

HOW DOES IT WORK FOR THE INTERDICTION TARGET?

Nuclear	Chemical	Full Hex City, Dot City, Port	Airbase & Airport	Assault ground unit, Nuclear Facility, Oil Terminal, POMCUS	HQ, ADN, LRMU, Oil Rig, Supply Line, Interdiction
		High Explosive			
Small	Available	100	80	71	53

Warheads available are nuclear (small) (N(S)), chemical (CH) and high explosive (HE).
Warheads probability of success and number of hits:

53% probability to inflict 1 hit with HE warhead
100% probability to inflict 2 hits with CH warhead
100% probability to inflict 4 hits with N(S) warhead

1. Check if the target is in range. Each Missile unit has a range specified on the counter (black number in yellow box) and on the Missile Table. If the target is in range, a missile strike is conducted.

→ **In range**

2. The target type is specified on the missile table.

→ **Interdiction, so we are using the rightmost columns on the missile table**

Nuclear	Chemical	Full Hex City, Dot City, Port	Airbase & Airport	Assault ground unit, Nuclear Facility, Oil Terminal, POMCUS	HQ, ADN, LRMU, Oil Rig, Supply Line, Interdiction
		High Explosive			

3. The player declares the warhead type: High Explosive (HE), Chemical (CH) or Nuclear (Small, Medium or Massive), if the unit is eligible as per the Missiles Table.

→ **Checking the SS-1c row of the table we find out the following informations:**

SS-1c Scud-B	Ground-Ground	10	Ground	N + CH + HE

4. Roll 1d100. If the modified die roll is equal to or less than the warhead's hit number then a hit occurs. Depending on the warhead type chosen, combat units and strategic targets take hits or may be destroyed by nuclear attack.

→ **WP player chooses to use HE warheads. As the target is "interdiction" the +20 DRM is not applied. The 1d100 roll against 32 is still not great but worth a shot. A roll of 62 is making the strike a failure, the hex is not interdicted.**

Attacks against targets in City hexes have an impact on World Opinion, rule [6.1].

→ **A nuclear warhead would have been a sure hit and the hex would have been interdicted. In addtion to the normal interdiction cost of 2 MPs to move through the hex, each stack of units moving through would suffer 3 hits.**

Nuclear attacks also have an impact on World Opinion, DEFCON and eventually on Victory Points. *[18.2] Nuclear Warfare*

Missile strikes against naval or ground units (including LRMU and HQs; excluding installations) that have not been reconnoitered suffer a +20 DRM on 1d100 roll. "Sure" hits are not modified. (Remember: Reconnaissance and Detection are different game mechanics)

15.1.4.2 Cruise Missiles in advanced game

StratMap / 26.1 Long Range Bombers / 21.2 Warsaw Pact Supply / 16.4.3.11 Interdiction Strike

SITREP

Strong Soviet reinforcements are on their way to feed into the large-scale offensive launched by WP forces.

Every WP Front (group of combat units) has its own line of communication (LOC) used abstractly by reinforcements before entering the OpMap.

Each hex of these lines may be interdicted, delaying every future reinforcement by 1 GT per interdicted hex.

THE MISSION

CONUS (Continental USA) based B-52 bombers strike the LOC in Poland (hex E20) to delay these reinforcements. The B-52s are in the USA holding box on the StratMap.

These air strikes are different:

- No air base display
- 1 sortie per GT
- May move on the StratMap

NATO player places the 379th Bombardment Wing in hex E0 (any western map-edge hex can be chosen) by spending 10 MPs and traces a flight path to hex E13 (140 MPs out of 515 MA).

Upon entering E13 the bombers release their AGM-86 cruise missiles. The missile table information is a range of 71 OpHexes (equals 7 StratMap hexes), sufficient to reach target hex E20.

Nuclear	HQ, ADN, LRMU, Oil Rig, Supply Line, Interdiction
Small	58

Hit probability for this kind of target with HE is 58. A nuclear attack would have been a sure hit, but not going nuclear this time. Rolling 1d100 = 58. That was a close call, but the target is hit and as such is interdicted. Mission accomplished.

Mark the hex with an interdicted marker and remember that all future WP reinforcements for the WF (Western Front) are delayed by 1 GT.

Trace a flight path back to any air base display or any Western map-edge hex in range to conclude the mission.

15.4.1. Battle-hardened

COMBAT RESULTS

In a previous combat, the Polish 16th Tank Division became "Battle-hardened" (BH).
Now it faces the famous 7th Armored Brigade. The combat result inflicts 1 hit to both sides.
Defender chooses to cancel the hit by retreating 1 hex.
Attacker has now two options:

- Take the hit and advance after combat
- Cancel the hit by waiving the advance after combat

If he chooses to take the hit he has again two options:

- Lose "Battle-hardened" status (remove the marker)
- Stay "Battle-hardened" and take the hit (in this example that would flip the unit)

MULTIPLE ATTACKING HEXES

The British are attacked from three sides by BH WP troops.The combat result calls for 3 hits to be taken by the attacker.

The WP player could chose to lose the 3 BH markers or take the three hits, which would have to be distributed evenly between the three stacks. Be aware that losing the BH status will only cancel 1 hit though! The other two would have to be taken. The player could choose to waive advance after combat to cancel the second hit. The 3rd hit I'm afraid, he has to take.

LOSE "BATTLE-HARDENED" STATUS

1. The stack of WP units gained BH status in a previous combat.

Now it splits up to attack two British Brigades in two different hexes.

All WP units lose their BH status.

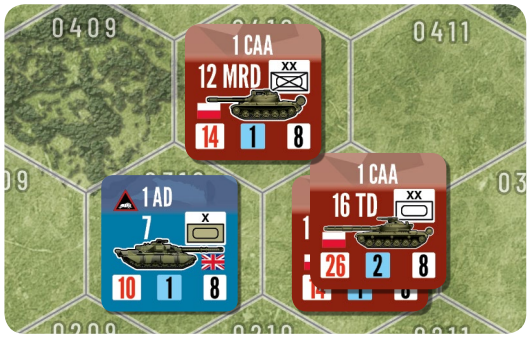
2. WP units gained BH status in a previous combat.

If the 15th GMRD enters the hex, BH is lost for all units in the hex.

IMPORTANT NOTE: It is NOT possible to lose and gain BH status in the same combat! That means that a unit exchanging its BH status to cancel a hit does not get back BH status, even if it won the battle.

15.5. Ground-Ground Combat

SITREP



GROUND-GROUND COMBAT

In the Combat Phase, the Polish 1st Combined Arms Army (CAA) is declaring its attack on the British 7th Armored Brigade with the 12th Motorized Rifle Division (MRD), the 15th MRD and the 16th Tank Division (TD).

	Step	Defender	Attacker
1	**STATE OF SUPPLY [8.1]** (as checked in the Supply Phase)	If OOS ▾ CSx0,5. No DD	If OOS ▾ CSx0,5. No HA/DA.
2	**TACTICAL WITHDRAWAL [15.5.2.1]** DEF decides		
3	**COMBAT FORMATIONS [15.5.2.2]** Both players secretly decide the combat formation of the involved units. Supply point cost per unit: Hasty 2 SPs, Deliberate 4 SPs.	HD ⬅ / DD ⬅⬅	HA CSx2 / DA CSx3
4	**TERRAIN [TEC] [15.5.3.2]** DEF decides	Variable	Variable
5	**INITIAL COMBAT RATIO** ATT CS divided by DEF CS		
6	**CAS [16.4.3.12] [16.2.9]** Both players may launch CAS missions	⬅	DRM +3
7	**NBC WARFARE [18]** Any eligible player may declare NBC warfare		Chem= Variable
8	**BATTLE HARDENED**	⬅	➡
9	**ARTILLERY SUPPORT [15.5.3.3]**	AC 0 / HD ⬅ / DD ⬅	AC +1 / HA +2 / DA +3
10	**RESULTS** Roll 1d10, apply all DRM and read the results in the Combat Results Table [CRT]		
11	**APPLY RESULTS** DEF first, then ATT		

FOLLOWING THE SEQUENCE OF GROUND COMBAT:

1. Check supply: state of supply is checked only once during a game-turn, in the Supply Phase. What you do here is just check if any units are marked "Out Of Supply" (OOS). In this example all units are in supply.
2. Defender may choose to make a tactical withdrawal. If he does, the ground combat sequence ends here. In this example he does not.
3. Both players decide secretly the combat formation of each of its stacks involved in this combat. Players put the respective markers on top of their stacks, with the hidden side up. All markers are then simultaneously revealed.

In this example:

Defender chooses "Hasty Defense". He has to pay 2 Supply Points (SP) per unit and gets the following advantage: 1 column shift to the left.

Attacker chooses "Advance to Contact" for the 12th MRD in hex 0410, at no cost and no advantage. Hex 0311 with two divisions is in "Hasty Assault" combat formation. For a cost of 2 SP per unit, the combat values are multiplied by two.

4. Depending on the terrain, combat values or column shifts may apply
5. Calculate the initial combat ratio taking into account combat formation and terrain effects

In this example:

Attacker combat value is (14x1) + ((26+14)x2) = 94. Defender combat value = 10. Terrain is clear, so no modifications. Initial Combat Ratio = 9-1.

6. Both players may now launch Close Air Support (CAS) missions. Who goes first depends on who is the Initiative player and in what Combat Phase the ground combat is declared. None is launched in this example.

7. Eligible players may declare using nuclear or chemical weaponry. None is declared.

8. Apply column shifts if any side has battle-hardened units. No units are battle-hardened.

9. Check if artillery support is available. No support available.

Applying column shifts and finding the attackers DRM:

- The initial column is 9-1.
- Due to the sole column shift gained for the combat formation the 9-1 becomes a 8-1. This column gives the attacker a +7 DRM:

Combat Ratio	1-4	1-3	1-2	1-1,5	1-1	1,5-1	2-1	3-1	4-1	5-1	6-1	7-1	8-1	9-1	10-1
ATT DRM	-6	-5	-4	-3	-2	-1	0	2	3	4	5	6	7	8	9

10. Roll 1d10 and consult the Combat Results Table (CRT)

In this example, let's assume that the 1d10 = 3. This 3 + Attacker DRM 7 = 10.

Modified 1d10	ATT	Extra hits		DEF	Extra hits
		≥ 5 REs	≥9 REs		≥5 REs
10	1			2	+1

The results are: Attacker takes 1 hit and the defender takes 2 hits

11. Apply results, defender first

In this example:

- Battles won marker advances +1 for WP as NATO suffered more hits than WP (according to the CRT)
- All attacking stacks get "Battle-hardened", apply markers
- Defender has now multiple choices:
  - → **Take 2 hits**
  - → **Take 1 hit and retreat 1 hex**
  - → **Retreat 2 hexes and take no hit**
- After the defenders' choice has been implemented, the attacker may:
  - → **Take 1 hit and advance after combat**
  - → **Waive advance after combat and cancel the hit**

15.6.1. Retreat

15.6.2. Advance after combat

Combat Results Table (CRT) [15.5]							
Modified 1d10	ATT		Extra hits ≥ 5 REs	Extra hits ≥9 REs	DEF		Extra hits ≥5 REs
1	2	R	+1	+1	0		
2	2	R	+1	+1	0		
3	2	R		+1	0		
4	2			+1	1		
5	1				1		
6	1		+1	+1	1		+1
7	1		+1		1		+1
8	1		+1	+1	2		
9	1		+1		2		+1
10	1				2		+1
11	1				2	R	
R = retreat 1 hex. Owner may choose to retreat instead of taking hits. [15.6.1]							

SITREP

The Polish 15th Guards Motorized Rifle Division and the 34th Landing Regiment declared combat on the Danish Slesvigske Fodregiment, hex 3921 becoming the battle hex. Each of the following cases will look at different results on the Combat Results Table.

CASE 1

At the end of the ground-ground combat resolution, the modified 1d10 is 5:

Attacker and defender each take 1 hit.

Both sides have choices, defender decides first.

Defender

Option A. Take the hit

Option B. Convert the hit into a retreat

The only eligible hex for the Danish to retreat to is 4020. Hexes 3920, 4021, and 3821 are not eligible for retreat as they are adjacent to attacking units.

Attacker

Option A. Take the hit and advance after combat if the defender retreated

Option B. If the defender vacated his hex, waive the right to advance after combat of all attacking units by nullifying the hit.

CASE 2

At the end of the ground-ground combat resolution, the modified 1d10 is 11:

Attacker takes 1 hit and defender takes 2 hits and a mandatory retreat.

Both sides have choices, defender decides first.

Defender

Option A. Take the hits and retreat one hex

Option B. Convert the hit(s) into retreat(s)

The first eligible hex for the Danish to retreat to is 4020. Hexes 3920, 4021, and 3821 are not eligible for retreat as they are adjacent to attacking units. The defending unit must retreat 1 additional hex per converted hit on top of the mandatory retreat.

Attacker

Option A. Take the hit and advance after combat if the defender retreated (into any hex of the retreat path, ignoring EZOCs).

Option B. Waive the right to advance after combat of all attacking units by nullifying the hit.

CASE 3

At the end of the ground-ground combat resolution, the modified 1d10 is 3:

Attacker takes 2 hits and a retreat, defender goes unharmed.

Both sides have choices, defender decides first.

Defender

Nothing to do

Attacker

Option A. Take the 2 hits and all units retreat 1 hex

Eligible hexes for the 15th GMRD to retreat to are 3819, 3720, and 3721. Hexes 3920 and 3821 are not eligible as both hexes are adjacent to the battle hex (which is also not eligible).

Eligible hexes for the 34th Landing Regiment are 4022, 3923, and 3822. Hexes 4021 and 3821 are not eligible as both hexes are adjacent to the battle hex (which is also not eligible).

Option B. Convert the retreat into a hit. All units involved in the combat suffer an additional hit instead of retreating.

16.4.3.5 Air-Air Interception

16.5 Air-Air Combat Rule / 16.5.1 Air-Air combat with standoff-weapons

SITREP

A stack of Soviet air units (side by side in this example for visibility) has entered NATO air space and has been detected automatically by NATO ADN.

THE MISSION

The 58 TFS of the US Air Force has been assigned to interception mode in the Unit Assignment Phase.

1. NATO player announces intention to intercept with this Squadron.
2. Soviet air units stop moving.
3. Put the "Air Mission Start" marker as a reminder on the air base and place the interceptors on the map with the anti-air mission marker. Pay 1 SP (supply point) for this air mission.

Both Soviet air units carry a marker to denote their respective mission too.

4. The air mission moves 2 hexes
5. The interceptors move 2 hexes
6. This alternating movement proceeds until any of both stacks is in air-air combat range, a look on the Missile Warhead & Hit Table:

F-16C:

Anti-Air - AMRAAM			AIM-7F Sparrow	
NA → Dogfight	4	3	2	

Both MiGs have no medium range stand-off weapons. This gives the F-16C the advantage of firing their missiles at 1, 2, or 3 hex distance while out of range of the Soviets who may only shoot at the Americans when they occupy the same hex.

7. After some moves the situation is ideal for NATO, although the Soviets have detected the Americans. The F-16 Squadron stops 1 hex away from the Soviets, (which gives it the best chance of success) and launches its AIM-7 Sparrow missiles

8. As the Soviet strike mission air units are escorted, the WP player was probably expecting a simultaneous air-air combat between interceptors and escorts to take place. Well, not in this case because the F-16C has fired at 1 hex range. The #6 found in the RCS at 1 hex range is the probability of the missiles finding their target. A roll of 1d10 must be equal to or less than this to hit number. On this occasion the 1d10 roll was a 7, so the missiles were shot and forgot to home in on their targets, no hit!
9. The Soviet player moves now and has 3 options:

A. Enter the hex and try to fight it out with the Americans or

B. Abort the mission and return to its air base or

C. Move to a different hex than the one occupied by NATO and continue its mission. It has spent its long range missiles but may still conduct air-air combat when occupying a hex with a detected enemy air unit.

OPTION A

They enter the hex, now all air units are in combat range and a simultaneous air-air combat is taking place between interceptors and the escorts. After this fight the interceptors and any aborted air mission units must return to their air base, their mission is considered concluded and other interceptors may take off. Unaborted air mission units may continue their mission, except if all were on anti-air (AA) mission. Those on an AA Mission escorting a Strike Mission can continue with their escort duties.

OPTION B

They trace a flight path back to their air base; other NATO interceptors may take off immediately after they moved 1 hex.

OPTION C

They trace a flight path to their destination hex; other NATO interceptors may take off immediately after they moved 1 hex.

The Soviets go for option "a" and enter the hex with the USAF F-16C fighters. All air units having been detected, air-air combat between the air units on anti-air mission will happen.

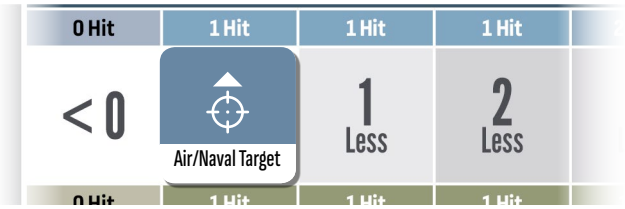
Both air unit counters are flipped, the F-16C has an anti-air rating of 7 and the MiG-23BN of 3.

Combat results will be applied simultaneously, so the order in which we resolve combats is not important.

NATO rolls for his air-air combat: 1d10 = 7. OK, putting the target marker on the 0 space on the Air/Naval Combat Track we find 1 hit as a result on the air target (the row above target marker is used for air or naval targets).

Now let's check for the ECM of the Soviets. WP 1d10 = 5, no effect as 5 is higher than the ECM rating. The MIG 23BN must abort escorting the Strike Mission as it has taken a hit.

WP rolls for his air-air combat: 1d10 = 8, no effect as higher than his anti-air rating.



16.4.3.6 CAP (Combat Air Patrol) in standard game

StratMap / 16.4.3 Air Combat Missions / 16.4.3.10 Anti-Ship Strike / 16.7 Air-Naval Combat / 18.2.2 Tactical Nuclear Attack / Missile Table / Detection Table / 13 Detection (Standard game)

CAP is an aircraft patrol provided over an aircraft carrier group for the purpose of intercepting and destroying hostile air or naval units before they reach their target.

SITREP

The US Carrier "CV 43 Coral Sea" is on patrol in the Baltic Sea.

THE MISSION

WP player wants to sink the carrier and plans an attack with Tu-22M3 (NATO code: Badger G) bombers from Damgarten air base in hex 3128.

PREREQUISITES FOR THE MISSION

- The type of air mission to attack a naval surface unit is Anti-Ship Missile Strike (AS)
- The target must be in range of the air unit
  - **A.** The Tu-22M3 can fly 243 OpHexes.
  - **B.** The Tu-22 show the AS4 indicator. A look at the Missile Table reveals that the AS4
    - **I.** Is the Raduga Kh-22 cruise missile, NATO code sign AS-4 "Kitchen"
    - **II.** is an anti-ship cruise missile
    - **III.** has a range of 14 OpHexes
    - **IV.** may carry conventional (HE) or nuclear (N) warheads, whereas the HE warhead has a 60% probability of hitting at a range of 3 hexes (1 hit) and the medium nuclear warhead a 100% probability of hitting (7 hits)

System	Call & NATO Code Sign	Launch Platform	Range (OP hex)	Target	Nuclear	Strat Hex Range 0				
						1	2	3	4	5
Kh-22 Storm	AS-4 Kitchen	Air	14	Surface	Medium	7	6	6	5	5

1. Replace the Tu-22 on the air base display with an air mission start marker
2. Place the Tu-22 counter on the air base hex 3128 covered by a Strike Mission marker on its "undetected" side
3. Pay 2 SPs (supply points) for initiating a strike mission. Move the Supply Level immediately.
4. Trace the flight path with the unit, giving the NATO player the opportunity to search for the 194th MRAP of the Soviet Union on its way to sink USS Coral Sea.

Meanwhile let´s look at NATO, more specifically at the Coral Sea carrier group and the air units on board and their disposition:

The inventory:

- **3 VFA fighter attack squadrons** ("V" stands for fixed wing, "F" stands for fighter, and "A" stands for attack) equipped with F/A 18A "Hornets" that are good in surface strike missions (B rating), anti-air missions (AA rating) and anti-ship missions (AS rating)
- **1 VMFA fighter attack squadron** ("M" stands for Marine)
- **1 VAQ** (Tactical Electronics Warfare) squadron with EA-6B "Prowler" aircraft
- **1 VA** ("V" stands for fixed wing and "A" stands for attack) squadron, A6E "Intruder" aircraft destined for surface and anti-ship missions
- **1 VAW** (Carrier Airborne Early Warning Squadron) with E-2 aircraft, the eyes and ears of the carrier group
- **1 HS** (Helicopter Sea) squadron equipped for sub-surface warfare with SH-3 helicopters

During the Unit Assignment phase the NATO player had placed VFA-131, VAQ-133 and VA-65 in Offensive mode, VFA-132, VMFA-451 and HS-17 in Interception Mode. The VFA-137 is placed on CAP mission with its AO-hex being the same hex the carrier is in. The VAW-127 is flying EWDA mission and therefore shows up on the map hovering over the carrier group.

5. While moving the Soviet air unit may be detected by the US E-2 aircraft over the carrier group.

[13] DETECTION (STANDARD GAME)

The detection ranges and probabilities are found on the Detection Table.

NATO Unit Type Attempting Detection	WP Unit Type To Be Detected	
	Air	
	Det. if equal to or less	Max detection range
EWDA Air Unit	7	10

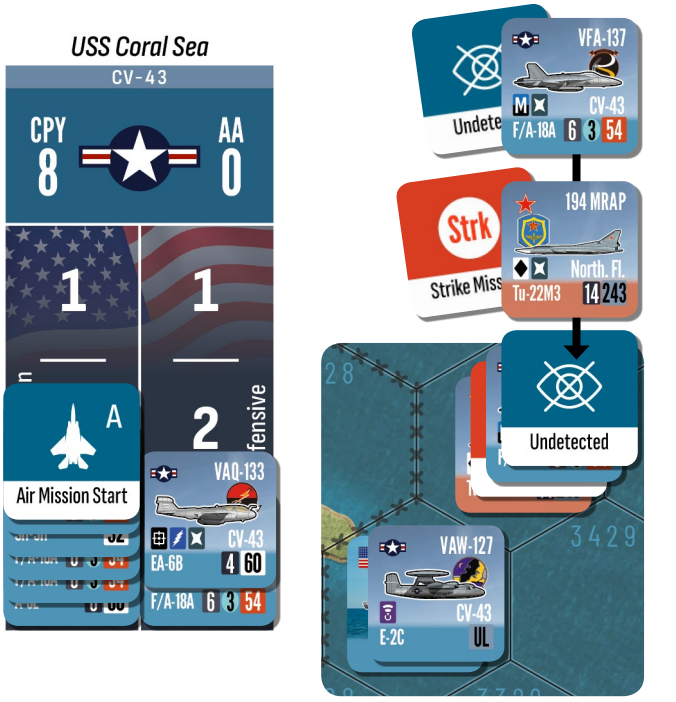
It's a NATO EWDA air unit trying to detect an air unit.

Maximum range is 10 and the detection die roll with a 1d10 has to be 7 or less.

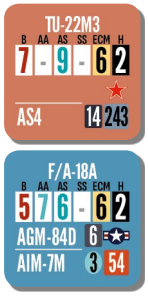
Given these ranges, the E-2 unit tries to detect the enemy immediately after having moved one hex. On a roll of 9 or less the detection attempt is successful. The dr of 4 detects the Soviet bombers. Flip the undetected marker to its air mission side.

6. CAP versus air units:

A. 1 air unit on CAP mission is placed directly on the enemy units covered by the anti-air mission marker on its undetected side. Air units initiating mission from carriers do not pay any supply points.



B. The Soviet air units on Strike Mission are allowed to make one detection attempt, but as they are not escorted, the interceptors conduct air-air combat without the bombers returning fire (which in this case would have been impossible anyway because Tu-22 have no AA rating), so no need to try to detect the interceptors.



C. Air-air combat : 1d10 = 7. The Hornets miss their sting and are returned to their AO-hex.

7. Now the Soviets have 3 options:

A. Use their cruise missiles with conventional warhead (70% for 1 hit) at 1 hex range.

B. Use their cruise missiles with nuclear warhead (100% for 7 hits)

C. Use their AS rating of 9: 90% hit probability

Option A.

Roll 1d10: A dr of 7 or less would have been 1 hit on 1 naval unit, attackers choice. But the roll is 8... missed.

Option B.

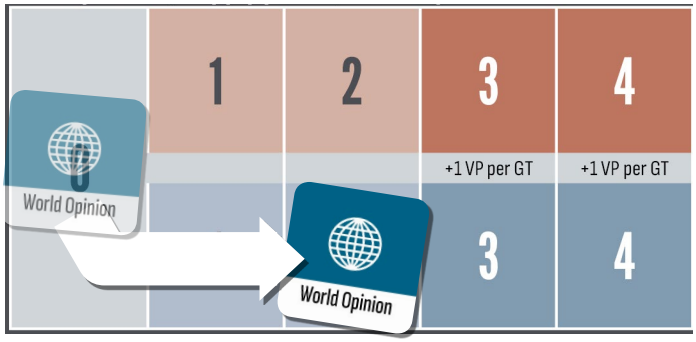
Note: A prerequisite must have been met before either player may use nukes.

Assuming this has happened, the Soviet Commander gives green light to evaporate the Coral Sea. No dr needed, a medium-sized nuclear warhead of about 500kt nearly (depending on the missile model used) always hits naval units. The 7 hits are enough to sink the carrier and all its aircraft. If this is the first ever nuclear attack in the game, NATO gets 15 VPs.

If this is the first nuclear attack in this GT:

1. Move the WO marker 2 spaces (medium sized attack) in favour of NATO.

2. Move the DEFCON marker 1 space down, towards 1.



Option C.

Soviets move into the target hex 3428 and attack at close range.

They have an impressive AS combat rating of 9, so any 1d10 else than 10 is a potential hit. WP rolls a 5. The Target marker is put on the "4 less" space of the Air/Naval Combat Resolution Track, indicating 2 potential hits:

Air / Naval Target				
1 Hit	2 Hits	2 Hits	2 Hits	3 Hits
2 Less	3 Less	Air/Naval Target	5 Less	6 Less
1 Hit	1 Hit	2 Hits	2 Hits	2 Hits

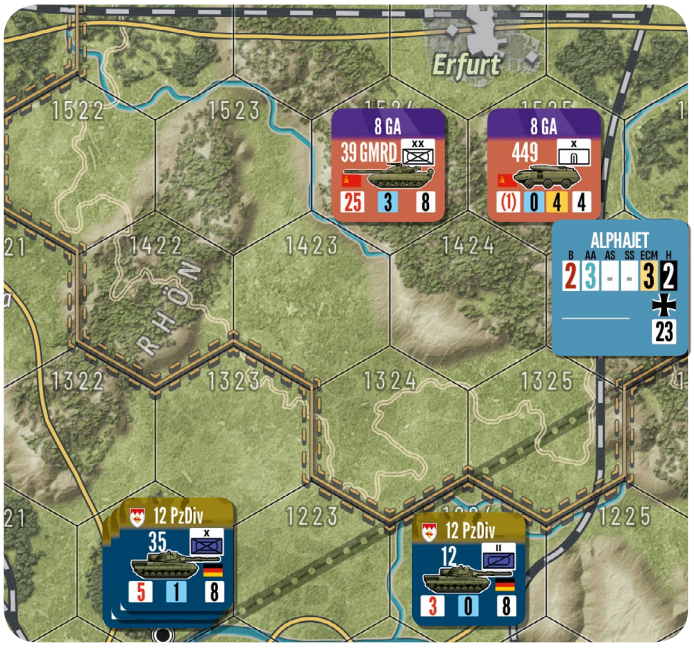
All sorts of countermeasures are resumed in the ECM rating of 5 of the carrier unit.

A dr of 8 seals the fate of the Coral Sea. 2 hits sink the Coral Sea.

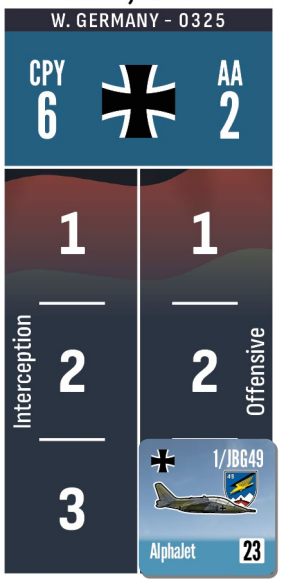
Lesson learned: don't risk your carriers so close to the enemies air base and a carrier should always be stacked with a naval surface action group (SAG) that works as a screening force [17.9] to absorb hits.

Transmission ends.

16.4.3.16 Reconnaissance Air Mission



Furstenfeldbruck



SITREP

The 449th LRMU (Long Range Missile Unit; Surface to Surface Missile) Brigade in hex 1525 is a threat to NATO ground units.

It may launch its tactical ballistic missiles with a nuclear warhead.

THE MISSION

NATO decides to destroy this threat with a surface strike air mission. As the best attack aircraft are attributed to other vital targets, this mission is entrusted to the JBG 49 of Alpha Jets.

To give their bombardment more punch, doubling this rating if reconnaissance is successful, a recce (reconnaissance) air mission is going to reconnoitre the missile sites.

1. During the movement phase, the NATO player designates 449th Missile Brigade in hex 1525 as the target of a reconnaissance air mission and pays 1 SP (supply point) for this air mission.

2. Move the "Available Recce" marker from 10 to 9 to record 1 mission less available for this GT.

3. Roll 1d10 to find out if the mission is successful, check the Recon Mission Success Table according to the terrain in the hex and the target type: the hex is wooded rough, and the target is a LRMU unit. Hard to find these mobile missile sites in hilly woodlands. 1d10 = 2, the target is reconnoitred! Jawoll!

Terrain	Target Type					
	LRMU, Submarine u.		HQ, Assault units, ADN Inst., Naval Surface units, EAB		POMCUS, Air Base, Airport, Other Inst., Interdiction	
	WP Spotter	NATO Spotter	WP Spotter	NATO Spotter	WP Spotter	NATO Spotter
Clear / Rough / Swamp Mountains / Coastal Water Town	3	4	4	5	9	9
Woods / W. Rough W. Mountain Open Water / City	2	3	3	4	7	8
Roll 1d10: if equal to or lower ▶ Success: put reconnoitred marker on unit						

4. The Soviet LRMU unit is immediately marked with a "Recon" marker. The imminent attack from the JBG 49 is going to have its bombardment rating doubled, from 2 to 4 and will hopefully wipe out this threat.

5. Roll 1d10 to find out about casualties on the air recce units: 1d10 = 6. No or very light casualties, the available number of recce air missions per GT is not impacted.

Air Reconnaissance Mission Casualties	1d10
Roll 1d10 / DRM per mission: 1 casualty if DR	≥10
Die Roll Modifiers:	
Target hex in Fully operational ADN and in range of an ADN installation	+2
Limited operational ADN and in range of an ADN installation	+1
Ground-Air rating of the target	+½ AA rating.
Number of available reconnaissance air missions permanently reduced by 1 for rest of game for each casualty. "Available Recce (Game)" marker is reduced by 1.	Rec GAME Undamaged Rec.

16.5.1 Air-Air BVR Combat (on the OpMap)

16.5. Air-Air Combat / 16.5.1. Air-Air Combat with stand-off weapons (BVR) / RCS

SITREP

The Soviet air force is intercepting an enemy close air support mission over the battlefield.

THE MISSION

The Soviet 148th IAP Fighter Regiment is intercepting the West German Alpha Jets supporting their ground troops.

The Su-27 fighters carry R-27 missiles with a range of 3 and a AA combat rating of 6. Depending on the distance the missiles are fired, the probability of a hit diminishes.

Examining the Missile Warhead & Hit Table we find the following:

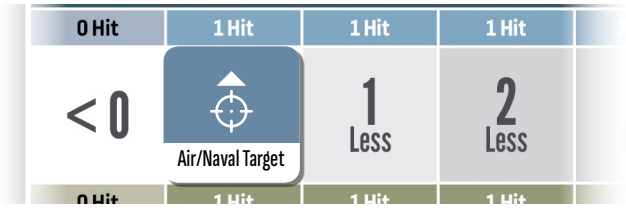
R-27R / R-27A	Air	3	NA → Dogfight	6	4	2

Firing the R-27 AA missiles at maximum range of 3 hexes offers a 20% chance of hitting the enemy.

The WP player has the choice to approach the Germans; enhancing the probability of hitting the target and raising the number of possible hits.

The rating under "AA" is the combat value in same hex combat, which is often the best, but not always.

The WP player advances three more hexes to get a 60% chance of hitting and fires its missiles while staying out of range of the Alpha Jets' anti-air weapons. 1d10 of 6 is barely touching the enemy aircraft, still 1 potential hit could be achieved.



Evasive actions of the Germans: ECM 1d10 = 5. The difference between the ECM of 3 and the dr is negative. The Target Marker is not moved and the Germans take 1 hit and abort their mission.

The Soviet mission is over.

16.5.1 Air-Air BVR Combat (on the StratMap)

16.5. Air-Air Combat / 16.5.1. Air-Air Combat with stand-off weapons (BVR) / RCS

SITREP

The Swedish Air Force launches an air superiority mission over the Baltic Sea.

THE MISSION

The Soviet 159th GvIAP Guards Fighter Regiment is intercepting the Swedish fighters.

The MiG-25 fighters carry R-40 missiles with a range of 3 OpHexes and a AA combat rating of 7.

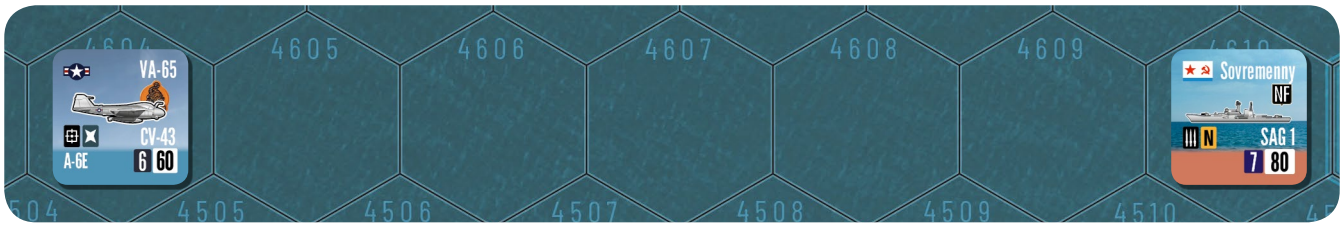
1 StratHex = 10 OpHexes. 3 OpHexes are rounded down to 0 StratHex range, the Soviets have to move into the target hex.

The MiG-25 has BVR missiles, the Swedes don't have a BVR capability. That's why the Soviets get a first shot and their attack is resolved first. Mark the unit as BVR fired. Now normal air-air combat, dogfight, is resolved.

16.7 Air-Naval Combat (on the OpMap)

16.7. Air-Naval Combat / RCS

SITREP



The Soviets move to sink US convoys en route to Europe. The aircraft carrier group around the Coral Sea is protecting the sea lanes in the North Atlantic.

THE MISSION

The Tigers (VA-65) attack the Soviet Surface Action Group lead by a Sovremenny class destroyer of the Northern Fleet.

The A-6E Intruders are equipped with AGM-84D Harpoon anti-ship missiles with an operational range of 6 OpMap hexes:

Depending on the distance the missiles are fired, the probability of a hit diminishes. Examining the Missile Warhead & Hit Table we find the following:

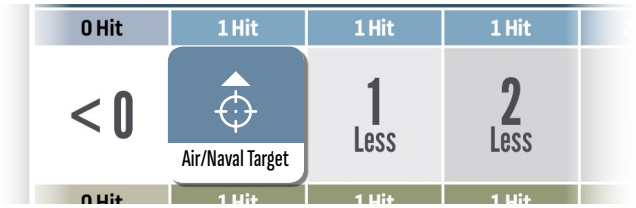
AGM-84D Harpoon / RGM-84 Harpoon / UGM-84 Harpoon	Surface	Counter	7	6	5	5	4	3

Firing the Harpoon missiles at maximum range of 6 hexes offers a 30% chance of hitting the enemy.

The NATO player has the choice to approach the Soviet naval unit; enhancing the probability of hitting the target and raising the number of possible hits.

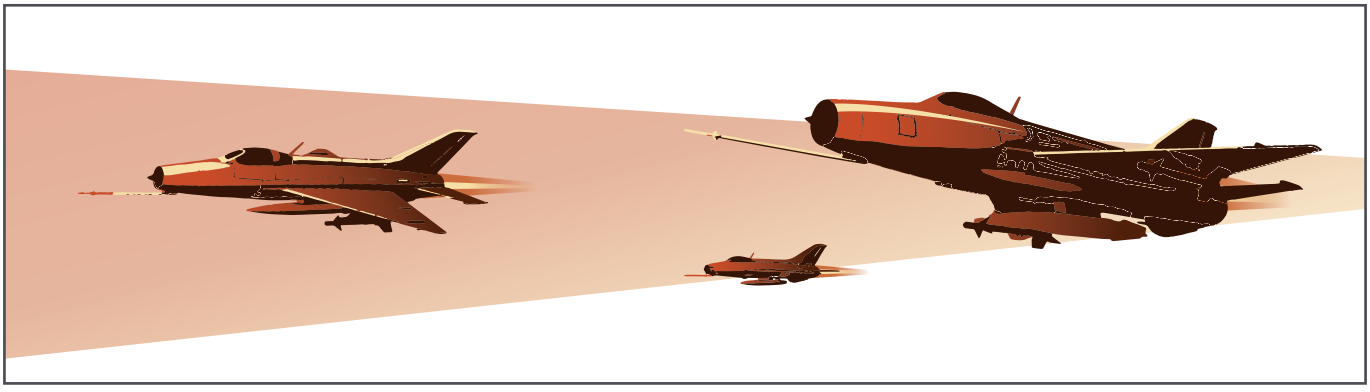
The rating under "AS" is the combat value in same hex combat, which is often the best, but not always.

The NATO player advances two more hexes to get a 50% chance of hitting (range 4 = 5) and fires its missiles over the horizon. 1d10 of 5 is barely touching the enemy ships, still 1 potential hit could be achieved.



Evasive actions of the Soviets: ECM 1d10 = 5. The difference between the ECM of 6 and the dr is 1. Moving the Target Marker 1 space to the left changes the 1 hit result to 0 hits.

The attack run is over.



16.7 Air-Naval Combat (on the StratMap)

16.7. Air-Naval Combat / RCS

SITREP

The Soviets move to sink US convoys en route to Europe. The aircraft carrier group around the Coral Sea is protecting the sea lanes in the North Atlantic.

THE MISSION

The Tigers (VA-65) attack the Soviet Surface Action Group lead by a Sovremenny class destroyer of the Northern Fleet.

The A-6E Intruders are equipped with AGM-84D Harpoon anti-ship missiles with an operational range of 6 OpMap hexes.

1 StratHex = 10 OpHexes.

6 OpHexes are rounded up to 1 StratHex range.

Depending on the distance the missiles are fired, the probability of a hit diminishes. Examining the RCS we find the following under BVR combat of A-6E versus surface:

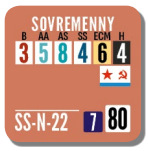
	Strat Hex R.	0						1								
	Op Hex R.	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
A-6E Intruder,	Surface	•	7	6	5	5	4	3									

Firing the Harpoon missiles at maximum range of 6 OpHexes (1 StratHex) offers a 30% chance of hitting the enemy.

The NATO player has the choice to fire its missiles from a 1 hex distance or enter the enemy units' hex and using the rating under "AS".

The NATO player advances three more hexes and enters the target hex to get a 70% chance of hitting. 1d10 of 7 is barely touching the enemy ships, still potential 1 hit could be achieved.

Evasive actions of the Soviets: ECM 1d10 = 5. The difference between the ECM of 6 and the dr is 1. Moving the Target Marker 1 space to the left changes the 1 hit result to 0 hits.



The attack run is over.

16.8 Air Defence Network (ADN)

15.7 Ground-Air Combat

THE MISSION

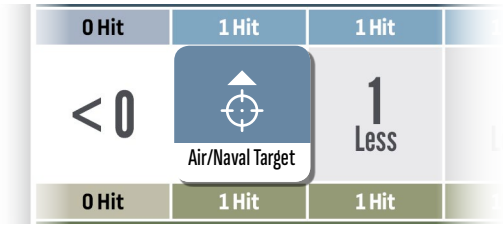
Czech air unit on a strike mission to bomb Neuburg Air Base.

NATO ADN is fully operational.

The Czech 28 SBOLP air unit flying the MiG-23BN is automatically detected by the NATO ADN (CRC Freising) upon entering its detection range of 6. Ground-air combat may immediately be initiated by the NATO player.

The 1d10 roll must be 5 or lower for the ADN scoring a hit on the air unit.

Assume 1d10 = 5. The difference is 0, put the Target marker on the corresponding space on the Air/Naval combat track:



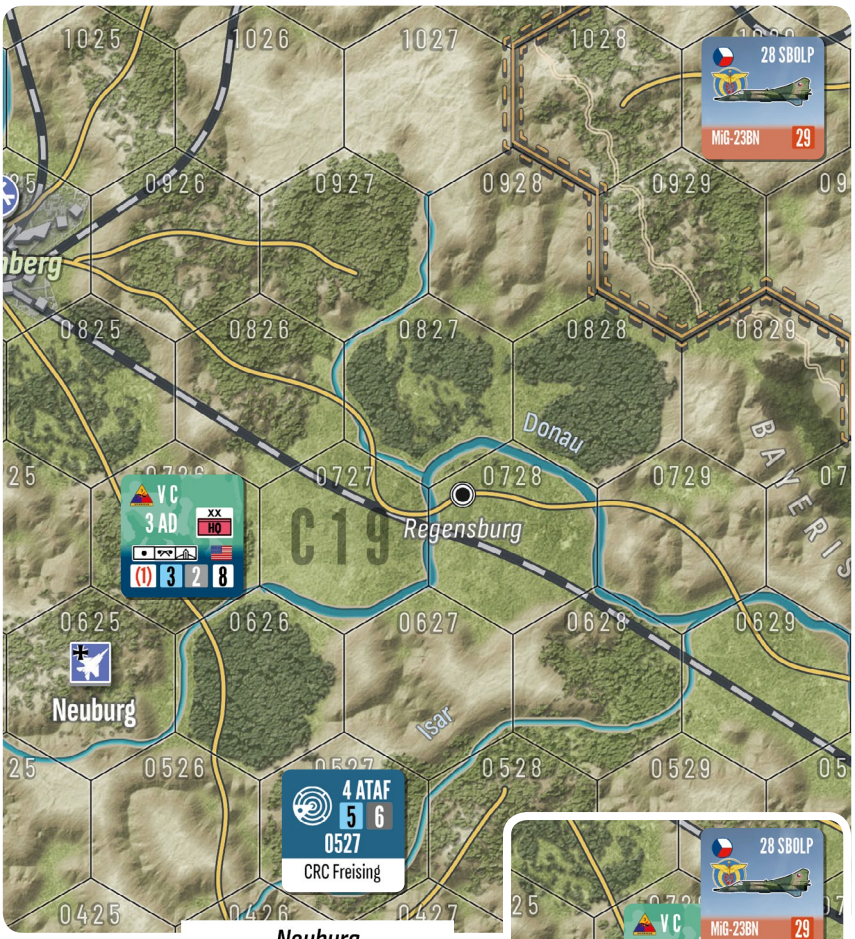
The air unit now rolls 1d10 against its ECM value of 3 to check how successful its evasive actions are. 1d10 = 1. Subtract the 1d10 roll from the ECM value: 3-1=2, this moves the Target marker 2 spaces to the left. Indeed, this means no hits inflicted on the air unit which continues its movement. Air units taking at least one hit abort their mission.

Note: only 1 ground-air ADN combat per air defense sector.

It might be attacked by ground units it flies over, for example hex 0726 on its way to bomb Neuburg Air Base. The Czechs are still detected and in anti-air range of the 3rd Armored Division HQ.

Resolve ground-air combat.

If the air mission is still not aborted, the Czech MiG-23 air unit will enter the air base hex and because it is detected it will undergo another ground-air combat by the anti-air (AA) of the base: AA 2 before it can drop its deadly payload.



Neuburg

W. GERMANY - 0625

CPY 4 | AA 2

17.3 Naval-Naval Combat in standard game

Rule 17.7.1 Minelaying / 13 Detection / 17.4 Naval-Naval Interception / 16.4.3.7 Air-Naval Interception / 17.7.3 Minesweeping

SITREP

War is about to break out and the Politbüro in Ost-Berlin gives the order to mine the Baltic Approaches (BALTAP) Sea Zone.

The SAG (Surface Action Group) of the East German Navy has the minelaying capability, (as well as the mine sweeping), as shown by the icon on the counter. It has already been detected.

Type 205 U-Boats of the West German Bundeswehr lie in wait off the coast in hex 3125. These submarines are undetected.

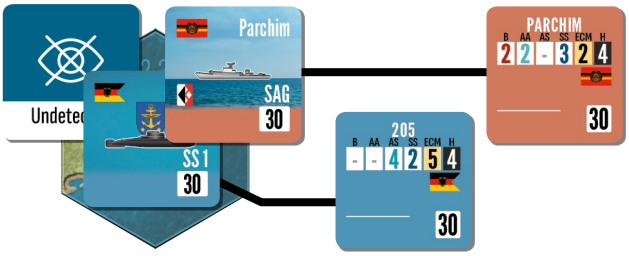
THE MISSION

Move the SAG to a hex in the BALTAP Sea Zone and lay mines (max. 1 level allowed per GT) by spending 10 MPs.

The SAG moves into hex 3126 and continues to move to hex 3225.

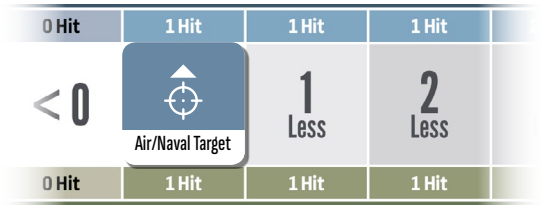
NAVAL-NAVAL INTERCEPTION

Now the Bundesmarine gives green light to the U-Boat Commander to intercept the WP vessels. The NATO player announces the interception and checks if the enemy is in range: MA of NATO unit = 30, so yes. The NATO subs are moved into hex 3225 (spending 1 MP for 1 hex distance). Because this unit has no ASMR (anti-ship missile range) it may only use its AS (anti-ship) rating at range 0 (in the same hex as the attacked unit), otherwise it could have attacked from a more distant hex.



The SAG gets a detection attempt and rolls 1d10 = 10. No detection.

The Soviet SAG's failure to detect it at range 0 means the German U-Boat has sneaked right in amongst it and now the NATO unit starts the combat with its AS rating of 4 (by spending 10 MPs). 1d10 = 4. We put the "Target" marker on the Air/Naval Combat Resolution Track on the 0 space as the dr matches the AS rating:



Note: submarines may also use their SUB rating (torpedoes) against surface ships.

The SAG will roll 1d10 against its ECM rating of 4. The dr is 6 so no effect, it incurs 1 hit. The hit marker is immediately placed under the SAG, showing the # of hits the unit has taken.

The submarine has used its AS rating, the Missile -1 marker is put with the sub. It has one more AS missile shot before running out of anti-ship capability. It's SS rating is NOT affected by the Missile -1 marker.

The Bundesmarine submarine unit is detected due to a detection dr of 3.

The Volksmarine opens fire. It has an SS (sub-surface=anti-submarine) rating of 3, which is reduced to 2 because of the one hit taken (for each hit all ratings except MA are reduced by 1). The 1d10 = 4, higher than the modified SS rating, so no effect on the submarine.

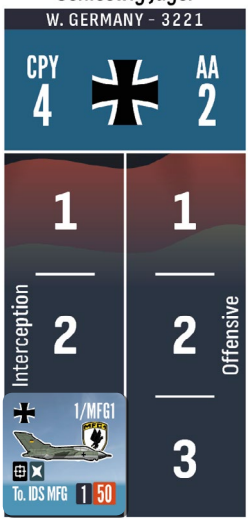
The intercepting NATO unit is considered moved for the GT as naval units may only move once per GT. Rotate the counter 90° to show its "moved" status. The intercepted WP unit stops moving and is considered moved for the GT.

This concludes the Naval-Naval Interception combat.

AIR-NAVAL INTERCEPTION

Assuming the NATO commander did not want to risk his submarine the WP unit continued its movement to hex 3325 and the NATO player announces an interception with the Marinefliegergeschwader 1 based in Schleswig-Jagel.

Schleswig Jagel



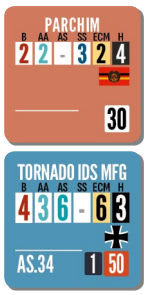
Prerequisites

- Is the naval unit in range? Yes, the Tornados have a MA of 50 hexes and the distance from Schleswig-Jagel AB (air base) to the SAG is 4 hexes.
- Can NATO pay 2 SPs (supply points) for the strike air mission? Yes, adjust the supply level accordingly.
- NATO player designates target unit in target hex (no need in this example, there is only one)

Putting the "Air Mission Start" marker on the air base display and the 1 MFG counter on the OpMap in the hex of the air base. From there the air unit traces a flight path to the targeted naval unit. If the intercepting air units were detected prior to their attack, they may be subject to anti-air combat by any eligible enemy units. In this example the air unit is only detected on entering the target hex.

Naval-Air combat (anti-air) and Air-Naval combat (anti-ship mission) are resolved simultaneously, hits are applied after both combats.

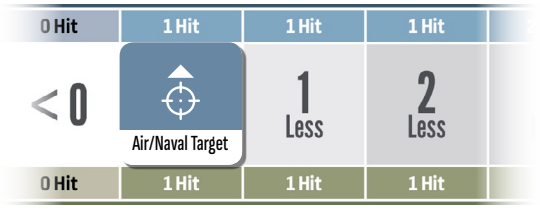
Naval-Air: The East-German ships have an AA (anti-air) rating of 2, thus need a roll of 2 or less to inflict a hit on the Tornados: 1d10 = 8, no effect.



Air-Naval: The Tornados of the Marinefliegergeschwader 1 launch their AS (anti-ship) missiles, the rating is 6, thus they need a 6 or less to hit: 1d10 = 6.

The potential hit on the WP vessels is marked on the Air/Naval Combat Resolution Track.

The evasive manoeuvre and electronic countermeasures capacity of the East-German SAG is rated 2. 1d10 = 6.



We read from the top blue row "1 HIT", that's what is the combat result against the WP. Rotate the hit marker from 1 to 2 hits. This WP naval unit has a hit capacity of 4, so this means that half the ships that form the unit have been sunk, heavily damaged or are out of service for the game.

The Marineflieger are returned to their air base and now occupy the sortie space #2 as they have used up 1 sortie. 2 left to do in this GT.

This concludes this Air-Naval Interception combat.

MINELAYING

For the sake of the example, let's say that no interception has occurred so far, and the East Germans continue their mission and enter hex 3424. The NATO player again decides not to intercept in response to this latest expenditure of movement and thus not being intercepted before laying mines, (although it could be intercepted after laying the mines as it would involve expending movement points)

The unit has spent 4 MPs out of its allotted MA of 30. Note: Naval units spend MPs for initiating combat, not for defending when attacked.

The WP lays 1 level of mines by spending 10 MPs (each combat function costs 10 MPs). Place a hit marker with the #1 on top in the "Baltic Approaches Sea Zone" mining level box.

After this, it has 16 MPs left but it chooses to not move any further. Good move because this enables the unit to lay more mines in the next GT without moving and thus not being intercepted before laying mines.

Rotate the WP counter 90° to show it has moved for the GT. Think about rotating the hit marker too!

This concludes the Movement and Minelaying.

MINESWEEPING

In the next movement phase, the Danish Eskadre 2 is going to sweep for mines. It must fulfil 3 conditions:

- Not having moved in this GT; it would be rotated 90° to show "moved"
- be in "at sea" mode to be able to spend MPs; "in port" mode units have a marker denoting that mode.
- Have the minesweeping capability; shown by a symbol on the counter.

To swipe mines, the naval unit spends 10 MPs, this triggers a mine attack. The mining level of this Sea Zone is 1 = attack factor. 1d10 = 1, consulting the Air/Naval Combat Resolution Track shows 1 hit on the naval target. Minesweepers have of course special anti-mine technology, this is shown by a generic ECM of 7 (not shown on the counter). 1d10 = 4, the target marker on the A/NCRT is moved 3 spaces (ECM 7 – 4 = 3) to the left, which moves the marker to a space with 0 hits.

The minesweeping mission was successful, remove the hit marker.

The Eskadre 2 has used 10 MPs of the 40 MA, so it may well continue to spend MPs by moving and/or initiating combat, but NOT to remove another level of mines in this or another Sea Zone. Remember to rotate the counter when it stops moving.

Note: 1 Minesweeper may only sweep 1 level of mines per GT.

This concludes Minesweeping

17.8 Convoys in advanced game

SITREP

Canadian ground units are earmarked to ship to the Central European battlefield.

The first have embarked on their Convoys (counter "Convoy 1") and are bound to arrive in Europe shortly.

THE MISSION

Bring the boys safely to Antwerp in Belgium, their destination port in D17.

The reinforcement schedule informs us that the Canadian 5 A Groupe-Brigade will become available on GT3 and embark on Convoy #1. The exact hex of entry is decided with a 1d10 where 1-2 is A1, 3-4 is A2 , 5-6 is A3, 7-8 is A4, 9-10 is A5.

In the NATO player movement phase the placement die roll of 1d10 = 3, so we place the Convoy marker number 1 on the StratMap on the hex A2. To guard the Convoy the Canadian SAG is moved from Halifax into the hex occupied by the Convoy. Both naval units have moved for the GT, rotate them 90°.

In the next NATO player movement phase in the next GT these units may move as a stack at the slowest speed of any unit in the stack (40 for the Canadian SAG) or the Convoy may move on its own at a higher speed with the risk of being intercepted without support and protection from warships.

In the GT following arrival in the destination port, change the "at sea" mode to "in port" in the Unit Assignment Phase .

In the next GT Assessing Reinforcement Phase replace the Convoy marker with the transported ground unit. The ground unit may move in the upcoming Action Stages and use its full MA.

21.2. Warsaw Pact Supply in advanced game only

The StratMap shows 4 Lines of Communication (LOC) running from Russia to the 4 Fronts in Central Europe.

Each LOC is used to transport reinforcements and supply to the battlefield.

The NATO player may delay reinforcements and cancel supply arriving via these LOC, by interdicting one or more hexes with air missions flown to those hexes or launching missile attacks.

HOW DOES IT WORK?

Let's pretend we are at the beginning of GT3 and that NATO has executed successfully multiple deep air strikes in the previous GTs on the LOC as shown on the map. The Western Front (WF) LOC has 2 interdicted hexes and the Southern Front (SF) 1 interdicted hex.

THE CONSEQUENCES ON REINFORCEMENTS

In the "Assessing Reinforcements Phase" the WP player consults the Order of Battle to check if he gets reinforcements. Indeed both the Western Front as the Southern Front have reinforcements scheduled for GT3.

Because of the interdictions, the WF reinforcements are delayed 2 game turns and those for the SF 1 game turn.

THE CONSEQUENCES ON SUPPLY

The WP "Supply Table" indicates a total of 30 Supply Points (SP) to be received in GT3. Due to the interdicted LOC of the Western and Southern Fronts, their scheduled SPs are permanently forfeited, reducing the number of SPs received to 15 for this and all ensuing game turns unless the LOC are repaired.

WP Supply Lines	GT1	GT2	GT3
Northern Front	5	5	5
Western Front	10	10	10
Southwestern Front	10	10	10
Southern Front	5	5	5
SP TOTAL	**30**	**30**	**30**

22 Inter-Map Movement in advanced game

StratMap Rule 16.4.3.2 Ferry Mission

SITREP

The Commander of the BAOR is in dire need of fighter cover and asks the Royal Air Force (RAF) to send more fighters.

THE MISSION

NATO player executes an Air Ferry Mission from the UK Air Base Leuchars (hex G15 on the StratMap). As this mission can not be intercepted there is no marker to trace the flight path.

Squadron 43 is dispatched to the Wildenrath Air Base in West-Germany (hex 1811 on the OpMap, lying inside D17 on the StratMap), run by the RAF.

NATO player starts the mission by placing the air unit on the StratMap in hex G15.

43 Squadron spends 10 MPs to enter G16, 10 more to enter transitional hex F16 and continues its movement on the OpMap by entering any map edge hex in hex F16 on the OpMap for the cost of 5 MPs. 3200 is the best choice for this move as it brings our air unit the closest to its destination.

From now on the flight path is flown on the OpMap as per standard movement rules.

Note: Detection and interception could have happened all along the flight path on both maps.

24 Detection in advanced game only

SITREP

THE MISSION

Intercept the West German submarines.

The West German submarine unit moves to hex 3328, within 2 Hexes of a Soviet submarine. Both are undetected. The Soviets attempt detection at 2 hex range and a lucky 1d10 of 1 pings the Germans. The Soviets declare an interception and may move 2 hexes to hex 3328. Upon entering hex 3428 the German submarine attempts detection at 1 hex range.

He rolls 1d10, and the result is an 8. The number indicated on the Ranged Characteristics

Submarine Naval Units	Op Hex R.	0	1	2
Detection	Surface	7	6	**5**
	Sub	4	**3**	1

Summary for a German submarine unit detecting an enemy submarine at a 1-hex range is 3. To be successful the die roll must be equal to or less than this number. The Soviet sub is therefore not detected.

Note: the white numbers on dark background are used on the StratMap at given Strat Hex Ranges.

Submarine Naval Units	Op Hex R.	0	1	2
Detection	Surface	7	6	**4**
	Sub	3	**2**	1

The Soviet submarine unit continues its movement and enters hex 3228. The NATO player declares another detection attempt. He rolls one die, and the result is 5. The RCS at a 0-hex range shows 4, therefore the Soviets are still not detected.

The Soviets open fire and hits on the Germans will be applied immediately, before they can shoot back.

Note: By using any combat rating, units are automatically detected.

25.2 Nordkapp in advanced game only

The battle for Norway is abstractly handled.

The premise is that the WP tries to eliminate NATO air bases in Norway. This will allow them to fly long range bombers from their air bases on the Kola peninsula into the Atlantic and interrupt the flow of reinforcements and supply to NATO Central Front.

HOW DOES IT WORK?

The FEBA marker starts in hex P23. This marker represents both sides ground forces in continuous engagement that is not resolved as normal combat.

Instead both sides may attack the FEBA marker with missiles, air, or naval strikes, cruise missiles, nukes.

Hits are recorded with a hit marker under the FEBA marker.

If the number of hits inflicted by either WP or NATO is 5 more than their opponent, the FEBA marker is moved. South towards I17 if it was the WP that achieved it and north towards P23 if it was NATO. This move is done during the End Stage.

The first time the FEBA marker enters a hex with an air or naval base, that base is considered destroyed for the rest of the game, (regardless of what happens with the FEBA marker subsequently). Moreover Norway capitulates if the FEBA marker enters hex I17, the city of Bergen, and all Norwegian units are withdrawn from the game.

26.5 Variable Aircraft Speed

Rule 16.4.3.5. Air-Air Interception

SITREP

A stack of Soviet air units (side by side in this example for visibility) has entered NATO air space and has been detected automatically by NATO ADN.

THE MISSION

The 5 Squadron of the Royal Air Force has been assigned to interception mode in the Unit Assignment Phase and is now set on anti-air mission to intercept the Soviets.

1. NATO player announces his intention to intercept with the UK 5 Squadron.
2. Soviet air units stop moving.
3. Put the "Air Mission Start" marker as a reminder on the air base and place the interceptors on the map with the anti-air mission marker. Pay 1 SP (supply point) for this air mission. Normally the interceptors would be "undetected", for the sake of this example we consider it "detected".

The Tornados are speed class 2 fast aircraft; their movement allowance (MA) is white font in a red box. Class 1 aircraft have their MA black on white. Now this optional rule comes into play:

4. The interceptor moves 10 hexes, instead of the 2 if the aircraft were in the same speed class.
5. Detection attempts against the interceptor follow standard or advanced rules (depending on the game you chose to play)

6. In this example the Tornado could move right into the hex of the Su-17 or stay 2 hexes away as he has stand-off weapons effective on 2 hex range.

Had the interceptor not immediately reached its target, alternating movement of both sides air units would have commenced after the 10 hex move; then 2 hex per side, exactly as in the normal interception rule. [16.4.3.5] Air-Air Interception detailed in the examples.

28.2 SF Raids in advanced game only

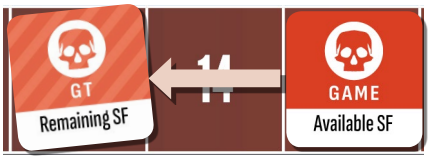
SITREP

Tomorrow at 5.45 hell will break lose. The first Comrades to cross the border will be our Spetsnaz Special Forces.

THE MISSION

Infiltrate enemy country and raid SOC Brokzetel, an ADN installation in hex 2816.

The Special Scenario Rules (SSR) indicate that the WP has 15 SF (Special Forces) missions available per GT. This number may drop in case of casualties suffered. Mark the actual GT limit with the "Available Special F. GAME" marker.



For each SF Raid initiated, move the "Available Special F. GT" markers one space down the track. Make sure to respect the limit. This marker is reset during the End Stage on the "Available Special F. GAME" marker.

During any Movement Phase that allows ground units to move, designate the target of the raid. Use the SF Raid Mission Success Table. In this case they roll a 4 on a 1d10 versus the ADN Installation column. They needed a 5, so they have succeeded.

Target Type			
LRMU	HQ	ADN Installation	Air Base & Other Inst.
2	3	5	7
Roll 1d10: If equal to or lower ▶ Success: inflict 1 hit. If target has been reconnoitred: 2 hits.			

How about casualties? The roll of 1d10 = 5 ...the valiant Spetsnaz Troop has been captured. One SF less available per GT for the rest of the game but 1 hit was inflicted on SOC Brokzetel. Mark this hit on the ADN Hit Register.

Special Forces Raids Mission Casualties	1d10
Roll 1d10 per mission: 1 casualty if DR	≥4

1 hit is inflicted on the SOC, mark this hit on the ADN Hit Register.

SOC	Brokzetel	2816	☒❑❑	❑

B1 - BATTLE SCENARIO FULDA GAP - AIR PLAYTHROUGH

Raid strike air mission with escorts, air-defense network combat, air-ground strike and air-air interception with air-air combat

The complete setup pitches from North to South parts of the West-German III Corps, the US V and VII Corps agains the Soviet 8th Guards Army, 1st Guards Tank Army and the East-German 3rd Army.

For this playthrough the GT starts in the Unit Assignment Phase where both players decide simultaneously the mode their units will start the GT in. This will determine in which segments ground units may move and under which circumstances air units may fly missions.

1.	**Strategic Stage**
	1. World Opinion 2. Initiative Determination Phase 3. Cards 4. Assessing Reinforcements Phase
2.	**Administrative Stage**
	1. Unit Assignment Phase ⬅ 2. Supply Phase 3. Weather Phase (optional)
3.	**First Action Stage** *Initiative Frontline Offensive*
	1. First Movement Phase • First Initiative Segment • First Reaction Segment 2. First Ground Combat Phase
4.	**Second Action Stage** *Initiative Reserve Exploitation*
	1. Second Movement Phase • Second Initiative Segment • Second Reaction Segment 2. Second Ground Combat Phase
5.	**Third Action Stage** *Reaction Player Counteroffensive*
	1. Third Movement Phase • Third Reaction Segment • Third Initiative Segment 2. Third Ground Combat Phase
6.	**End Stage**

As the WP is going to attack, all WP air units are put on offensive mode and on the sortie box 2:

NATO player is balancing his air force into interceptors and offensive strikers:

All WP ground units stay in Frontline mode and are as such going to be mobile in the first Action Stage (AS), enabling them to enter West Germany.

NATO units behind the frontline are put in Reserve mode to be able to counter-attack in Action Stage 1 and 2. In order to change into Reserve mode, two things to consider: Reserve capacity of the HQ and its command range. German 12th PzDiv HQ is a divisional HQ and as such may put 1 directly subordinate unit in Reserve if that one is in command range.

	Command Size	Size Symbol	Command Range in hexes	Reserve Capacity
NATO HQ	Army	XXXX	8	6 RE
	Corps	XXX	4	3 RE
	Division	XX	2	1 RE
WP HQ	Front	XXXXX	8	6 RE
	Army	XXXX	4	3 RE
	Corps	XXX	2	1 RE

1st Brigade, 3rd US Armored Division is too far from its division HQ, but the Corps HQ is in range and as 1st Bde is subordinate to V US Corps it may be put in Reserve Mode.

The next phase is the supply phase, but we will skip it for this particular playthrough.

We enter the First Action Stage where all the cool stuff will happen.

First Movement Phase (9.1.1)	
Roll for naval movement allowance.	
First Initiative Segment (9.1.1.1)	
1. INITIATIVE PLAYER	
GROUND UNITS	• LRMU in Frontline mode may fire missiles • Move if in Frontline mode • Special Forces missions
AIR UNITS	• Move if in Offensive mode • Combat Air Patrol (CAP) • Air Recce missions
NAVAL UNITS	• Move & Combat • Defend
2. REACTION PLAYER	
AIR UNITS	• Intercept if in Intercept mode • Combat Air Patrol (CAP)
NAVAL UNITS	• Intercept • Defend

First Reaction Segment (9.1.1.2)	
1. REACTION PLAYER	
GROUND UNITS	• LRMU in Reserve mode may fire missiles • Move if in Reserve mode • Special Forces missions
AIR UNITS	• Move if in Offensive mode • Combat Air Patrol (CAP) • Air Recce missions
NAVAL UNITS	• Move & Combat • Defend
2. INITIATIVE PLAYER	
AIR UNITS	• Intercept if in Intercept mode • Combat Air Patrol (CAP)
NAVAL UNITS	• Intercept • Defend

First Combat Phase (9.1.2)	
1. INITIATIVE PLAYER GROUND UNITS	Initiative player declares ground-ground combat.
2. REACTION PLAYER CAS	Close Air Support (CAS)
3. INITIATIVE PLAYER CAS	Close Air Support (CAS)
4. COMBAT RESOLUTION	After resolution he declares the next combat.

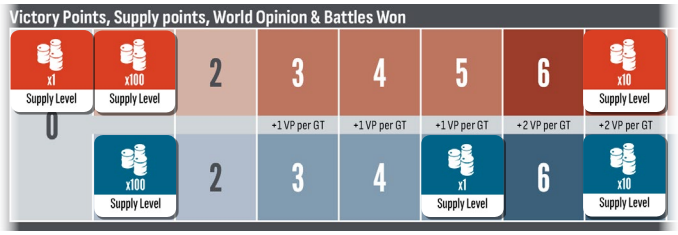
The Initiative Player now moves his ground units in frontline mode and initiates offensive air missions. The Reaction Player may launch interceptors to counter the latter.

A good idea would be to soften up the NATO GDP (General Defensive Position) by striking them hard, but NATO air defense must be destroyed first. So, the WP launches offensive air strikes against the ADN installation in Lauda. Maximum number of air units on a single mission is 6. A mix of fighter-bombers and bombers is the key to success.

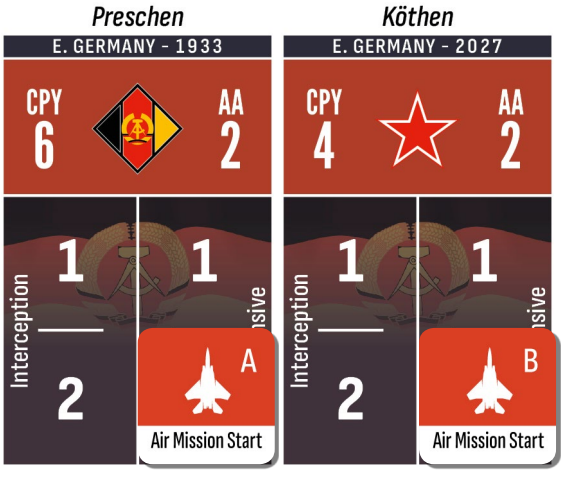
The 85th IAP is the fighter escort takes off from Köthen and has an anti-air mission marker, the MIG21 of JG-3 (take off in Preschen) have the strike marker as it wants to bomb the LAUDA CRC. The JH-3 MIG29 will be the other fighter escort unit.

To launch air missions, supply points must be spent, 2 SPs per air unit on a strike mission and 1 SP per air unit on an anti-air mission. Record the spent SPs immediately on the General Track.

Action			# SPs	
Air Missions	Strike (incl. CAS)	Regular Range	2	per unit
		In-Flight Refueling (Opt. Rule 30.7)	NATO 4 WP 6	per unit
	Any other mission (incl. Air reconnaissance)	Regular Range	1	per unit
		In-Flight Refueling (Opt. Rule 30.7)	NATO 2 WP 3	per unit



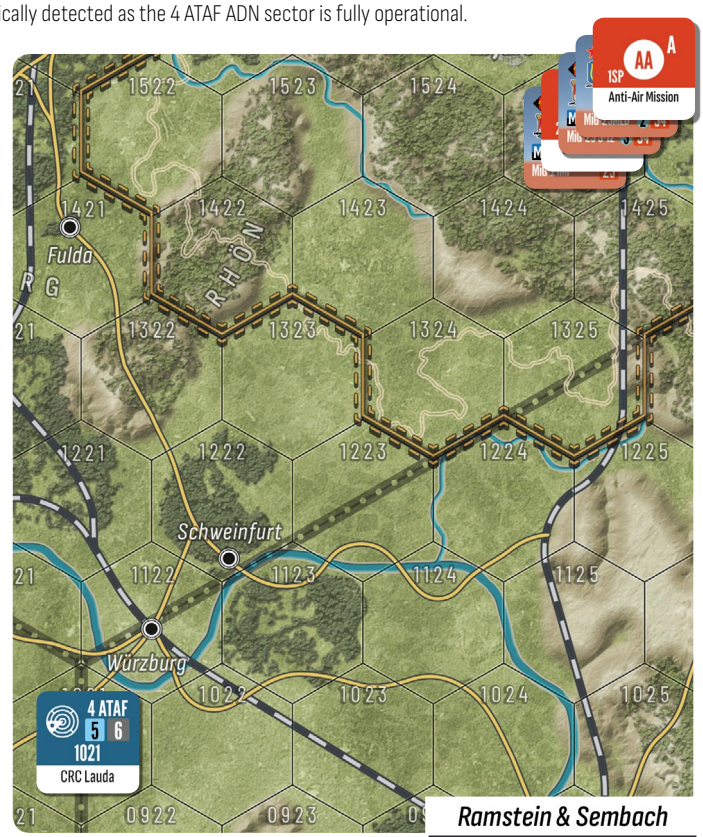
The air bases and modes of the air units on mission are marked:



3 air units from 2 different air bases form up for a raid, they move hex by hex alternatively until reaching the "Form-up Point" from where on they will move as a stack.

After having formed-up, that marker is switched to its back "Recovery Point". The composition of the stack of air units: 1x Strike Mission and 2x Escort Missions. The MIG21 on Strike mission looks like a bait.

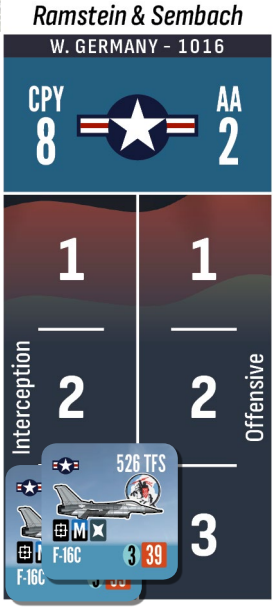
The mission enters the detection range of CRC Lauda (range 6) in hex 1525 and is automatically detected as the 4 ATAF ADN sector is fully operational.

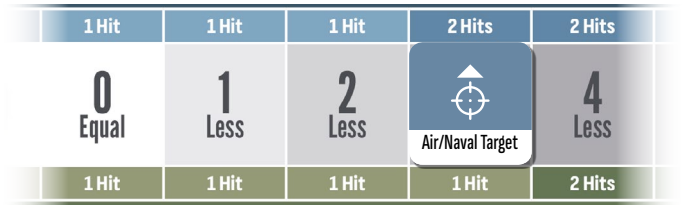


The mission has been detected and triggers the interceptors in Ramstein, which take off and take aim at the intruders.

Interceptors move 2 hexes, followed by Air Mission stack moving 2 hexes. Interceptors move again 2 hexes...

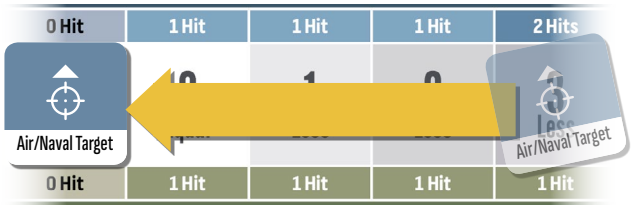
On entering hex 1223 in the fully operational 4 ATAF ADN sector the air mission stack receives a full volley of NATO ground-air rocket science. NATO ADN installations have an anti-air rating of 5. The 1d10 roll is a 2.





2 is 3 less than the anti-air rating, the target marker is put on the 3 less space of the Air/Naval Combat Resolution track. This would mean that the WP suffers 2 hits (to be distributed equally) and must abort 2 air units.

But: The WP stack of air units is now rolling for its ECM value (representing all sorts of chaff, flare, evasive maneuvering, ECM etc.). The best ECM value of the WP air units is 5 and the 1d10 of 1 is just great, because 5 – 1 = 4 and means moving the target marker 4 spaces to the left which results in 0 hits.



The WP Air Mission enters its target hex and executes the Strike Mission on CRC Lauda. The WP player tries to detect the approaching F-16.

MiG-29 9-12, MiG-25PD Foxbat E	Air	6	4	3		

A 1d10 roll on the RCS Chart, the MiG-29 has the best chances. Roll 4 or lower and detect the interceptors: 7! The MiG-21 and MiG-23MLD also fail their detection rolls. Although the US pilots are late to prevent the strike on the CRC, they may have the advantage of surprise in the upcoming air-air combat.

But first the WP air units will bomb the CRC. The target is in clear terrain, so no die-roll modifier applies.

Alas, the bombing value of the sole air unit on Strike Mission is only 3, and the 1d10 is 7. No hit on the CRC.

When target in any type of mountain	DRM +2
When target in any type of city or wood	DRM +1
Target has been reconnoitred	B rating x2

Now the interceptors move into the hex and since all three WP air units again fail their detection rolls a massive air battle starts:

The still undetected 512th and 526 TFS get to shoot first, with results being applied before the WP may shoot back.

Anti-Air (AA) rating of 7 and a 1d10 of 4 make for a nice starting point with 2 provisional hits:

The best ECM value of the WP air units is 5 and the 1d10 of 0 (read 10) is completing the defeat.

The WP units take 2 hits, distributed evenly amongst the escorts and those hit must abort the mission. As the strike mission has already been executed, the WP air units trace a flight path back to the recovery point and from there to their respective air bases in East Germany.

The interception is considered finished. The NATO units land safely in Ramstein AB on Sortie Box 2.

Transmission ends.

B1 - BATTLE SCENARIO FULDA GAP - GROUND PLAYTHROUGH

Ground movement and combat including missile strikes and CAS (close air support).

This example pitches elements of the West-German III Corps, the US V and VII Corps against the Soviet 8th Guards Army, 1st Guards Tank Army and the East German 3rd Army.

No pre-Game turn 1 movement in this playthrough example.

WP player plans to attack the US 11th Armored Cavalry Regiment in hex 1421. How does this work out? Let's do this step by step.

First, consult the SOP (sequence of play), we are starting the **First Action Stage** with the **First Movement Phase** and the **First initiative Segment.**

First Initiative Segment

First Initiative Segment (9.1.1.1)	
1. INITIATIVE PLAYER	
The Initiative Player's units may perform the following activities, as often as possible for eligible units and in any order.	
GROUND UNITS	• LRMU in Frontline mode may fire missiles • Move if in Frontline mode • Special Forces missions
AIR UNITS	• Move if in Offensive mode • Combat Air Patrol (CAP) • Air Recce missions
NAVAL UNITS	• Move & Combat • Defend
2. REACTION PLAYER	
The Reaction Player's units may perform the following activities, as often as possible for eligible units in response to the Initiative Player's moves.	
AIR UNITS	• Intercept if in Intercept mode • Combat Air Patrol (CAP)
NAVAL UNITS	• Intercept • Defend

The Initiative player may move all his ground units in frontline mode and may undertake offensive air missions. The Reaction player may intercept with his air units.

Notes: CAS (close air support) are executed in the Combat Phase. Don't worry about them now.

LRMU's fire their missiles in any eligible segment corresponding to the mode they are in.

This means that we can concentrate on moving our ground and Mi-24 Hind units into position. **How?**

Soviet 39th Guards Motorized Division moved from hex 1524 to 1423 (1MP for clear terrain + 1MP for small river with pontoon support from 8th Guards Army HQ in range), crosses the IGB (Inner German Border) at no extra cost if moving from East to West into hex 1323 (1MP) and moves into 1322 (4MP for wooded rough).

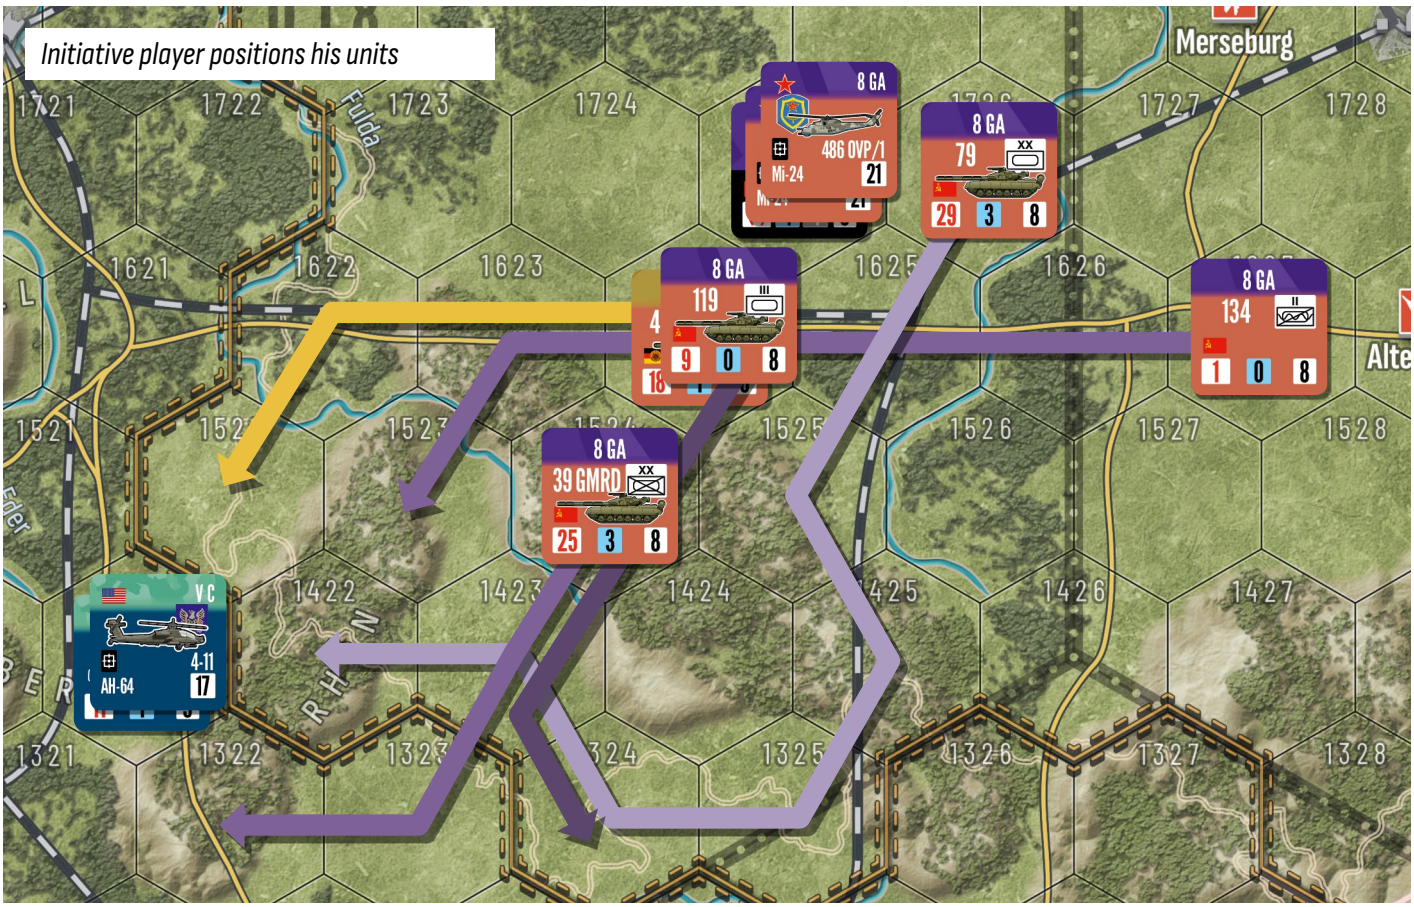
The US unit is a Regiment, which is 1 RE and so it doesn't project a ZOC. If one of the WP had enough movement it could continue its movement after it had moved adjacent to the US unit.

Note: EZOC may be entered at no MP cost, but the moving unit must stop moving.

Soviet 79th Tank Division uses the railroads (not railroad movement) from hex 1726 to 1325 (0.5 per hex, for a total of 2MP) then moves through 2 clear terrain hexes 1324 and 1423 (1MP each) and finally into the Rhön Mountain hex 1422 (4MP).

East German 4th motorisierte Schützendivision (MSD) starts off in hex 1624 and uses railroad to 1622 (2x 0.5MP), turns south-west into clear hex 1522 but crosses a small river (1MP due to Pontoon support from 3rd East German Army HQ in hex 1828 and in command range).

The Soviet Divisions are joined by 2 Mi-24 Hind helicopter units. Both starting in 1725, they fly overland to reach hexes 1422 + 1322. Helicopter units are not automatically detected by enemy ADN.



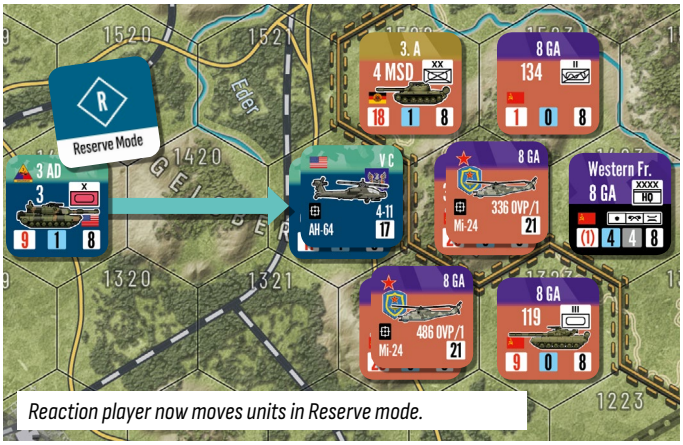
First Reaction Segment

First Reaction Segment (9.1.1.2)	
1. REACTION PLAYER	
The Reaction Player's units may perform the following activities, as often as possible for eligible units and in any order:	
GROUND UNITS	• LRMU in Reserve mode may fire missiles • Move if in Reserve mode • Special Forces missions
AIR UNITS	• Move if in Offensive mode • Combat Air Patrol (CAP) • Air Recce missions
NAVAL UNITS	• Move & Combat • Defend
2. INITIATIVE PLAYER	
The Initiative Player's units may perform the following activities, as often as possible for eligible units in response to the Reaction Player's moves.	
AIR UNITS	• Intercept if in Intercept mode • Combat Air Patrol (CAP)
NAVAL UNITS	• Intercept • Defend

The Reaction player may now move all his ground units in Reserve Mode and initiate air missions with air units in offensive mode, which might be intercepted by the Initiative player.

3rd Armored Brigade of the 3rd Armored Division in hex 1419 is in Reserve mode.

3rd Armored Brigade moves straight to Fulda, crossing the Vogelsberg for 4 MP and entering the Fulda clear hex for 1 more. Remove the Reserve marker.



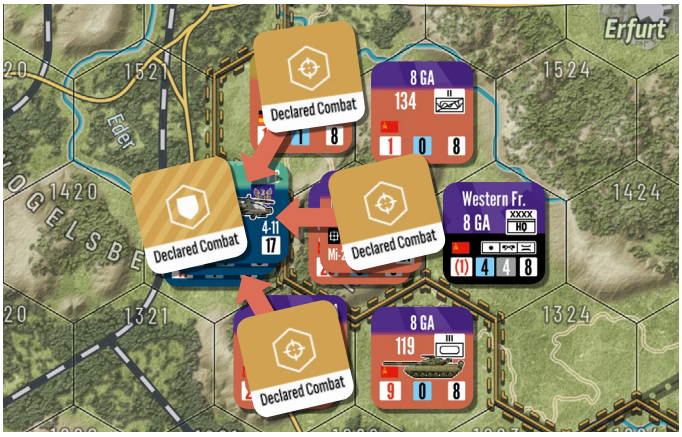
Reaction player now moves units in Reserve mode.

Note: the NATO player could also launch offensive air missions except Close Air Support which are executed in the Combat Phase.

First Combat Phase

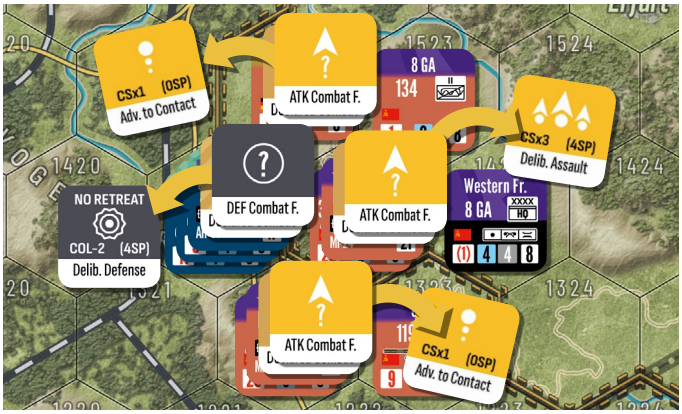
First Combat Phase (9.1.2)	
1. INITIATIVE PLAYER GROUND UNITS	Initiative player declares ground-ground combat.
2. REACTION PLAYER CAS	Close Air Support (CAS)
3. INITIATIVE PLAYER CAS	Close Air Support (CAS)
4. COMBAT RESOLUTION	After resolution he declares the next combat.

The initiative player declares one attack by placing declared combat markers on the defender's hex and the hex or hexes from where the attack will take place. Remember: Check effects of out of supply [8.2]. Supply state is checked in the Supply Phase, not now!



The defender could now decide to attempt Tactical Withdrawal but decides not to.

Next, both players choose secretly the combat formation of each concerned hex by placing the appropriate marker on the hex(es). Both players reveal simultaneously the marker(s) indicating their choice.



NATO ➔ Deliberate defense for all units in hex (Eligibility: in command range of 3rd AD HQ or V Corps HQ and for deliberate => be part of the same command hierarchy, V Corps in this case)

WP ➔ 79th Tank Division in Deliberate Assault (had to be in range of 8th Guards Army HQ). The attacking player may now declare use of NBC weapons.

Reaction CAS

Reaction player **may now launch CAS missions with helicopter units and/or** other air units in Offensive mode.

The US 3-227 Helicopter unit takes off to attack the East German MSD in hex 1522. This move may be intercepted by WP air units.

Upon entering hex 1522 the East German may detect the US unit prior to them using their bombardment rating against them. A 1d10 of 2 (normally detection at 5 or lower, but vs helos a +3DRM is added) or less ? Nope, a roll of 8 means not detected, the heli unit can use its bombardment rating of 6 vs the East- Germans. A dr of 7 is a miss, the CAS mission is unsuccessful.

Now the MSD anti-air shoots back at the US AH-64 helicopters, (automatically detected now it has used a combat rating in the same hex), the ground-air combat strength is a printed 1 (number in blue box) and the 1d10 gets a -1 DRM because of the close air defense modifier, but WP player rolled 4. No effect.

Netherlands	-3 DRM
US, French and West German	-2 DRM
Belgium	-1 DRM
All WP	-1 DRM

The heli unit flies back to hex 1519 to conclude its CAS mission. The counter should show its backside as a reminder that it has used up its 1 sortie due to taking off from a FOB.

1 successful CAS mission is enough to get a positive combat modifier in the upcoming ground-ground combat.

Initiative CAS

Initiative player now gets a chance to inflict damage on the US units defending Fulda.

The 486th OVP is the first to try its luck and penetrates hex 1421. Detection roll of 9. Soviets may release their ordnance, bombardment rating 5 and die roll of 3 means the CAS mission is successful. Mark the defenders hex with a CAS marker. Now the US units get their anti-air shooting. Two units may fire: the 11th Armored Cavalry Regiment and the 3rd Armored Brigade, each with an anti-air rating of 1 and a DRM of -2 because of the Close Air Defense: dr 7 and 4, no effect. The Soviet helis return to their FOB in 1322.

Assault Segment

Both players pay supply points for combat supply corresponding to the combat formation they chose *[CFET]*

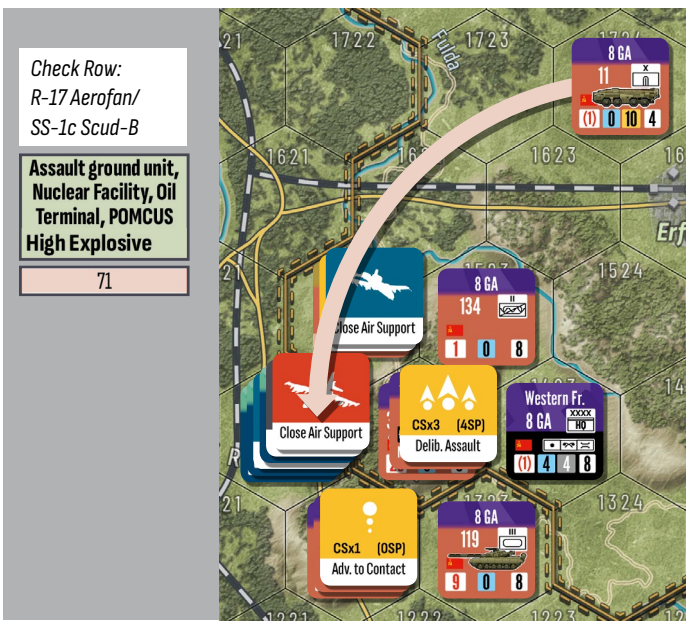
NATO ➔ 8 supply points (2 units x 4 SPs)

WP ➔ 4 supply points

Reduce supply levels on the General Track accordingly

Action	# SPs	
Hasty Assault	2	per unit
Deliberate Assault	4	per unit
Hasty Defense	2	per unit
Deliberate Defense	4	per unit

WP launches ground missiles on Fulda hex 1421. The 11th Missile Brigade in hex 1724 is in range (black 10 in yellow box) and launches is SS-1C missiles (Scud-B) with conventional warheads (HE) on the defending Americans.



The Missile Table informs us, that for a ground unit target attacked with SS-1c and HE the probability of a hit is 43%. We roll 1d100; result 31, adding the +20 DRM penalty: targets missed. Had the target hex been reconnoitered the +20 DRM would not have been taken into account and the missile attack would have been successful.

The missile unit has used one of its 3 shots, it gets a -1 missile marker.

Note: flip the -1 missile marker to its -2 after the next shot. After the 3rd shot remove the unit counter from the game.

Let's check combat modifiers!

- **Supply:** All units participating in the combat are in supply ➔ no modifier
- **Terrain:** Defender's hex is clear terrain ➔ no modifier

Combat Formations:

- **Attacker:** 79th TD = Deliberate Assault ➔ Combat Strength (CS)x3 (29*3=87)
- **Defender:** Deliberate Defense ➔ 1 column shift left

Artillery Support:

- **Attacker:** has artillery support from 8th GA HQ ➔ DRM +1 (one of the attackers is in Advance to Contact combat formation)
- **Defender:** has artillery support from V Corps HQ ➔ 1 column shift left

Close Air Support:

- **Attacker has CAS ➔ DRM+3**
- **Defender has no CAS ➔ No Modifier**
- **Battle-Hardened units:** None present ➔ No modifier

Combat ratio

- **7-1 initial combat ratio**

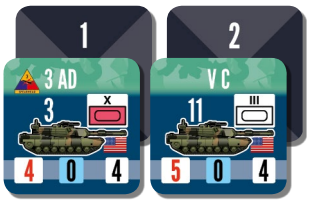
In total:

Attacker starts with +6 DRM on the die roll.

The initial combat ratio is 7-1 but the defender gets a total of 2 column shifts to the left, to the 5-1 ratio giving the attacker another +4 DRM, for a total of +10 DRM.

1d10 = WP rolls a 7, add 10 for a final DR of 17.

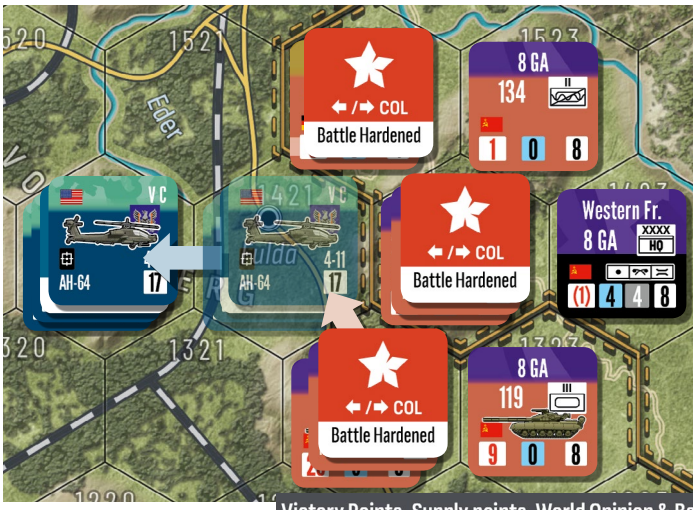
The combat result is 4R for the defender and 0 for the attacker.



4R ➔ 4 hits + Retreat (always 1 hex)

Defender (NATO) would like to retreat 1 hex instead of taking 1 hit and retreat on the Vogelsberg hex 1420, but units in "deliberate defense" are steadfast and hold the line. They never retreat! Instead they suffer one more hit.

The 5 hits are distributed as equally as possible. That means 2 hits on one unit and three on the other, NATO player's choice. He decides to put two on the 3rd Brigade and three on the 11th Armored Cavalry Regt. The first hit (only) on any unit in a ground combat will flip it. The 3rd Brigade has taken two hits, so it is flipped and takes a 1 hit marker. The 11th Armored Cavalry Regt is likewise flipped and given a two-hit marker.



All three victorious WP stacks gain Battle-Hardened status.

NATO has taken more hits than WP who has won this battle. Move the Battles Won marker to the right on the track.

Remove the CAS and combat formation markers.

Transmission ends.

	Step	Defender		Attacker	
1	**STATE OF SUPPLY [8.1]** (as checked in the Supply Phase)	If OOS ▼ CSx0,5. No DD		If OOS ▼ CSx0,5. No HA/DA.	
2	**TACTICAL WITHDRAWAL [15.5.2.1]** DEF decides				
3	**COMBAT FORMATIONS [15.5.2.2]** Both players secretly decide the combat formation of the involved units. Supply point cost per unit: Hasty 2 SPs, Deliberate 4 SPs.	HD ⬅	DD ⬅⬅	HA CSx2	DA CSx3
4	**TERRAIN [TEC] [15.5.3.2]** DEF decides	Variable		Variable	
5	**INITIAL COMBAT RATIO** ATT CS divided by DEF CS				
6	**CAS [16.4.3.12] [16.2.9]** Both players may launch CAS missions	⬅		DRM +3	
7	**NBC WARFARE [18]** Any eligible player may declare NBC warfare			Chem= Variable	
8	**BATTLE HARDENED**	⬅		➡	
9	**ARTILLERY SUPPORT [15.5.3.3]**	AC 0	HD / DD ⬅ / ⬅	AC +1	HA / DA +2 / +3
10	**RESULTS** Roll 1d10, apply all DRM and read the results in the Combat Results Table [CRT]				
11	**APPLY RESULTS** DEF first, then ATT				

DESIGNER'S NOTES

History of the game

RED STRIKE is the fruit of years of research and work on graphics, rules, and charts. It has been a long and for the most part solitaire journey that started in 2003. Many times, motivation went down the drain and sometimes the project stalled for long stretches of time, years even. In 2017 a Chinese publisher showed interest and of course I did not hesitate to grab the bull by the horns, but again this road lead nowhere. Until in 2020 the Chinese publisher asked me if I would agree to work with a German company. I thought "Made in Germany" sounds good but was hesitant until I literally went postal when VUCA contacted me. We quickly found out that we had already beknown each other while playing a mega-wargame in the same team. Patrick has been for the last years a patient and motivating motor of game development. I am grateful to him for having never lost faith in me and the project (at least that is what I like to think).

I have lived my whole life in Luxembourg, the heart of Europe. Born in 1969, the Cold War was part of the first 20 years of my life. To me, the Cold War is something I lived in. Luxembourg, my home country, is a founding member of NATO. One of the largest NATO warehouses (if not the largest) was situated 5 km from my home and would surely have been a priority target if ever the balloon had gone up.

US REFORGER units were regularly using Luxembourg airport during exercises.

I was a regular visitor of the yearly Remembrance Day (with participating US Army and Air Force personnel of the nearby US bases Bitburg and Spangdahlem, showcasing tanks, helicopters, and other tools of warfare, a small parade and socializing with visitors) in the city of Ettelbrück, in honor of the US troops and especially General Patton's Third Army who freed Luxembourg from the Nazi occupation late in 1944.

My parents were evacuated to France in 1940 when Nazi Germany invaded neutral Luxembourg and were living under German oppression. Stories of those times were often told by members of their generation.

The sum of all this sparked my interest in military affairs very early, but the single most influence derived from my two elder brothers who introduced me to miniature wargaming. It was after the sudden death of my oldest brother that my parents bought me "Panzergruppe Guderian" by SPI for my ninth birthday in 1978.

Today, more than forty years later, hundreds of games and more than thousand books on my shelves, probably thousands of hours of wargaming under the belt and having witnessed the fall of the Soviet Union and the rise of China to super-power status, it's time for me to give something back to my preferred hobby.

It is not usual to dedicate a wargame, but in my case, I absolutely want to do just that.

RED STRIKE is dedicated to my two elder brothers Gaston and Romain who introduced me to miniature war gaming.

To my late parents who started my hex and counter addiction by offering me « Panzergruppe Guderian » (boxed designer edition, SPI) in 1977 or 1978.

Finally, thanks to my ex-wife Nathalie who supported me, I had the time and leisure to dive into this project.

Design inspirations

Why **RED STRIKE**?

The idea, or maybe more correctly the wish, of a game about a hypothetical 3rd World War in Central Europe dates to my first plays of "Aegean Strike" in the early nineties. Rare are the games that made it so often to my table than this one. I was stricken by Mark Hermans complex system that was brilliantly turning the back to the IGOUGO dogma and IMHO simulating modern combat in an unprecedented way. I was sure the system would lend itself perfectly for air, sea, and land combat in Central Europe.

That said I was waiting patiently for a game marrying the Cold War gone hot with the Strike system. After long years of waiting, I started to design the game on my own and for my own personal use.

That was in 2003 when the first map and counter designs were drawn on my personal computer. Since then, things changed, and you hold in your hands the project of a lifetime. During research I read books, used online sources, watched documentaries, and played wargames, always with a notebook at hand. The most useful sources are listed in the playbook.

Some facts to describe the scope of the undertaking: for research I was screening eBay and attending air-shows across Europe to buy out-of-print books or wargames on the subject, I had to find willing people to translate Czech, Polish and Russian websites (google translator did help too), I spent literally hundreds of hours to write an accurate OOB of NATO and Warsaw Pact forces in 1989 (date of the outbreak of hostilities in RS).

Over time other games influenced RS and the latest version you hold in your hands has become a system on its own, built upon the Strike games but you probably are going to recognize features of the "Flashpoint: Golan, VG", the "3rd WW series" from VG, "The Next War, SPI", "NATO The Next War in Europe, VG", the "Next War series" from GMT, and others.

HISTORICAL TIMELINE

Jan 4	Gulf of Sidra incident: Two Libyan MiG-23 "Floggers" are engaged and shot down by 2 US Navy F-14 Tomcats.
Jan 19	Erich Honecker, head of state of the GDR declares "the Wall will still be there in 50 and even in 100 years, because the reasons fort he wall will still be there".
Jan 20	George H. W. Bush succeeds Ronald Reagan as the 41st President of the United States of America.
FEB 2	In Vienna negotiations between NATO and the Warsaw Pact about troop reductions in Europe end without any result.
FEB 6	Border guards of the GDR shoot and kill the 20 year old Chris Gueffroy while he tries to flee from East-Berlin to West-Berlin.
FEB 15	Soviet war in Afghanistan: The last Soviet Union armored column leaves Kabul, ending 9 years of military occupation.
APR 4	In Brussels, Belgium, NATO celebrates its 40th anniversary.
APR 8	Georgian demonstrators are massacred by Red Army soldiers in Tbilisi's central square during a peaceful rally; 20 citizens are killed, many injured. Demonstrators want Georgia to quit the USSR.
APR 12	In Hungary the Politburo of the Hungarian Socialist Party is newly formed.
APR 17	Poland, Solidarity was again legalized and allowed to participate in semi-free elections on June 4.
APR 19	A gun turret explodes on the U.S. battleship Iowa, killing 47 crew members.
APR 20	NATO debates modernizing short range missiles; although the U.S. and UK are in favour, West German Chancellor Helmut Kohl obtains a concession deferring a decision.
APR 21	Students from Beijing, Shanghai, Xian, and Nanjing begin protesting in Tiananmen Square.
MAY 2	The first crack in the Iron Curtain: Hungary dismantles 150 miles (240 km) of barbed wire fencing along the border with Austria.
MAY 14	Mikhail Gorbachev visits China, the first Soviet leader to do so since the 1960s.
MAY 20	Tiananmen Square protests of 1989: The Chinese government declares martial law in Beijing.
MAY 25	Elections to the Congress of People's Deputies were held. This was the first free election in the Soviet Union since 1917. Gorbachev became Chairman of the Supreme Soviet (head of state).
JUN 3	The Ayatollah Khomeini dies in Iran; during the funeral, his corpse falls out of the casket into the mob of mourners.
JUN 4	The Tiananmen Square massacre takes place in Beijing on the army's approach to the square, and the final stand-off in the square is covered live on television.
JUN 7	The East German security (STASI) dissolves a manifestation in East-Berlin that denounced the election fraud of the local elections held on May 7.
JUN 8	The East German government classifies the Tiananmen Square massacre as rightful to eliminate counter-revolutionary elements and shows comprehension for the use of military force.
JUN 12-15	Gorbachev visits Bonn and is greeted by a cheering crowd. He declares that the wall can be brought down as soon as the reasons to its building vanish.
JUN 27	In a symbolic act the Hungarian and Austrian foreign ministers cut the wired-fence on their border.
JUL 7	On the first east-bloc summit since 1968 in Bucharest, Gorbachev agrees each socialist country to develop on its own. This is the end of the so-called Brezhnev doctrine from 1968.

HYPOTHETICAL TIMELINE

JUL 8	With the backing of the Red Army, Soviet Politicians attempt a coup, declare Gorbachev an enemy of the state and condemn him to exile. Gorbachev hopes that Boris Jelzin's intervention in favor of Perestroika and Glasnost would be successful evaporate over the next days as KGB and MVD arrest the "revolutionaries" and "enemies of Communism". The grip of the Politburo and the Red Army is tightening.
JUL 9	In Bucharest, Gorbachev asks for, and is immediately granted, political asylum in the US. George H.W. Bush quickly cuts short his visit to Poland, cancels all remaining meetings in Eastern Europe and flies to Brussels to meet with Gorbachev.
JUL 20	All NATO members break off diplomatic relations with Moscow and begin openly supporting pro-democracy groups within the USSR.

Design choices

I strongly believe that the most fun for players comes from learning about the capabilities of their units. To get to know what is inside their toolbox. What assets to use and when to use them, to ultimately defeat their opponent. The game rules are intended to be intuitive with less fuss and chrome than other games on the subject while still conveying a real thematic feel to the gamer. Quite a number of optional rules have been included for those of you that relish even more detail.

It is amazing to witness how the sequencing of actions changes the outcome of battles and scenarios. It really matters. This "free will" approach, (as I call it), offers a myriad of choices to make and decisions to take. The straight jacket approach where each action is restricted to a precise moment in the sequence of play on the other hand often creates the frustration (at least to me) of having missed the phase where I could have done this or that. Not in **RED STRIKE**. Don't get me wrong, you can't do what you want all the time but within your action segment, and with proper previous planning, you are the master of your own success or disaster.

The decision to offer the game with a standard ruleset assumes that a fair number of players prefer faster and tighter games. The grognards of course, those with time and space, will play the Advanced Rules. The Optional rules can be used in the standard and advanced game. Why so many optional rules? To keep the core game as light as possible, while giving players the opportunity to decide how complex they want their games to become and the level of realism they wish to incorporate. I have found the following optional rules as adding a good portion of realism without being particularly complicated to implement:

- 30.7. In-flight Refueling
- 30.13 Variable Aircraft Speed
- 30.15 Wild Weasels
- The single most important optional role is the Doctrine rule 30.2. who has a huge restricting impact on the Warsaw Pact Players options.

A word on balancing. If you are looking for balanced scenarios and campaigns useful in competitive gaming, you are going to be disappointed. Those of you who have already invested your time and energy in playtesting scenarios know how difficult that task is. Even more so if you are first time designer. Only over the past few months I could get hold of a few really dedicated play testers who invested a lot of time, and I would like to express my deep appreciation to them for their help. Still, it would take months to make at least the Battle Scenarios 100% balanced ones. I sincerely hope you are going to have as much fun playing as we had while testing the scenarios.

How to play the game

Before jumping into the game, players are advised to make a Master Plan outlining the overall strategy, objectives, and operations to achieve a specific mission or goal. Break down the plan into different phases and assign specific tasks to different units. Each unit contributes to the overall objective with their unique capabilities.

Think of your forces as an orchestra. In an orchestra, musicians must coordinate their playing, timing, and dynamics to create a harmonious performance. Each instrument in an orchestra has a distinct role and contributes to the overall sound. The execution of a musical performance involves musicians playing their respective parts at the right time and with the appropriate expression.

While mastering game mechanics is important, the real challenge is to understand the capabilities of the assets at your disposal and in what sequence to use them.

The following is a non-exhaustive list of issues players should think about before moving units in the pre-Game Turn 1 movement phase and the regular Game Turn 1.

Missile units: what targets should they attack, what is the strategy? Enemy Air Defense Network (ADN) installations are valuable targets, as are HQs and air bases. You can't do it all, at least not in one GT. Are you going to shoot out all your missiles in one huge volley or keep some of them (those with nukes?) in the backhand?

Air units: What is your air forces' task? Air superiority? Supremacy? Maximum ground support? Depending on the task you must choose a wise combination of air units in offensive or interception mode and the air bases they are stationed at. If deep strikes are your thing, range is going to be an essential point to keep an eye on.

Ground units: When and where do you want to hit the hardest and break through? Again, you must make choices based on terrain and defense positions you know about. What's more? Reserve! You have three Actions Stages (AS) to move your units but wait, only in the first one your frontline troops may move. Not putting any of your units in Reserve means you lose the opportunity to hit the weak spot twice or take advantage of a hole in the enemies' frontline. A good understanding of the usefulness of units in 'Reserve' mode greatly helps the defender to bolster his potentially attacked units and the attacker to exploit initial gains.

Naval units: Are you attempting an offensive amphibious move in the Baltic Sea Approaches? Do you play it safe and want primarily deny access to NATO into the Baltic Sea? What are your options to get Victory Points in the North Sea by destroying or capturing Oil Rigs or sinking convoys?

All of this might seem obvious, but I assure you that you are going to regret having not at least made up your mind about all of this. Often you will try to do more than is possible.

I'd like to stress the fact that one game turn represents roughly 48 hours of combat and that everything that happens in those 48 hours is nearly simultaneously going on. With paper and cardboard things seem to happen sequentially, but that is not so. Remember that when you are questioning rules or if they do not quote explicitly in what sequence to execute actions, use common sense.

Let it be clear that the first and probably second game turns are going to take a long time to play but you will realize that the attrition rate is high and the number of units at your disposal will dwindle rapidly.

The first GT is of utmost importance to the initiative player, just like the opening moves in chess.

Strategic hints

There are many ways to lose the game, but the good news is, there are many ways to win it too.

The Initiative Player has a real advantage over the Reaction Player. Keeping it or taking it from your adversary is key.

Targets must be prioritized by matching the capabilities of your assets with the victory conditions. Define and plan main thrusts and sequencing of your attacks.

To quote Eisenhower:

"In preparing for battle, I have always found that plans are useless, but planning is indispensable."[1]

Being frantic like a headless chicken gets you nowhere. The headless chicken plan will be your ruin particularly around supply, because at first supply seems to be abundant, but it is not. You will be surprised by how fast you are going to burn through your supply and find yourself with limited or no opportunities to wage effective warfare. Another important factor is time. Except for the Campaign scenarios that have a larger time span and therefore lend themselves to a more strategic game, objectives in the Battle scenarios must be reached fast as their duration is much shorter.

If playing the advanced game and possibly adding the optional doctrine rule, I recommend that the most experienced player chooses to play the Warsaw Pact.

A final piece of advice: stick to the lessons learned in the Gulf War in 1991, (so close to this games' setting in 1989). The best source for finding out about these lessons is the aptly named "Military Lessons of the Gulf War" by Bruce W. Watson, Bruce George, Peter Tsouras, B. L. Cyr.

Tactical hints

Use your reconnaissance assets on your primary targets to get significant results right from the start. Primary targets are the ADN installations, air bases and HQs.

Position your HQs effectively so they can support your troops with artillery and pontoons to cross the rivers.

As the initiative player place enough units in Reserve so as not to miss the second and third action stage operational opportunities that may arise.

In the Naval War part of the game, use your maritime patrol aircraft to detect enemy naval units, such as WP sink convoys, use your long-range missiles and the abundant number of submarines. Remember to use your long-range air units. Make reconnaissance missions before you attack important targets.

Your air forces have specialized aircraft for different roles: fighters for anti-air, ground attack for destroying ground/naval targets and some multi-role aircraft models that are good in both roles. Weigh carefully how many of your fighters will be needed in offensive or interception mode without unbalancing your overall defense or attack capability.

Often overlooked rules and assets

- Reconnaissance is essential to boost the lethality of aerial and missile attacks.
- Special Forces can do reconnaissance missions as well as attack installations.

[1] *This quote reflects Eisenhower's understanding of the inherent uncertainty and fluidity of real-world situations, particularly in the context of military operations. While plans themselves may become outdated or irrelevant in the face of unexpected events, Eisenhower believed that the process of planning was crucial. By engaging in thoughtful and thorough planning, individuals and organizations can develop a deeper understanding of their goals, potential challenges, and available resources, which better equips them to adapt and respond effectively to changing circumstances.*

Eisenhower's quote emphasizes the importance of flexibility and adaptability, acknowledging that circumstances can evolve rapidly, requiring adjustments to initial plans. Rather than relying solely on rigid plans, Eisenhower emphasized the value of planning as a dynamic and ongoing process that enables individuals and organizations to navigate uncertain terrain successfully.

- Reserves are important but the number of units that may be put in reserve is limited. Use this capability wisely.
- Air units must spend supply points for each mission! Record that immediately when initiating the air mission or you will forget it.
- Some air units have long range anti-air missiles, (BVR), so take advantage of them. As do some naval units.
- Cruise missiles are often ignored; they should be used abundantly!
- MP cost for naval units in coastal waters
- Use control markers on cities and railways
- No ground-air combat against enemy air units if friendly air units in the same hex
- Impact of NATO AWACS on air-air combat
- Missile depletion of naval units

DISCLAIMER:
Many are those that have helped me over the last years to finish **RED STRIKE**. But I am the only one responsible for any errors.

YVES RETTEL

Lastly, we would like to express our deepest appreciation to all the incredible volunteers who dedicated their time, skills, and passion to the development of this game. Your unwavering commitment and expertise have added depth and richness to the game, making it a truly memorable experience for all who play. Without your valuable contributions, none of this would have been possible.

To our dedicated testers. Your valuable feedback and insights have been invaluable in refining the game to its finest form.

PATRICK GEBHARDT & YVES RETTEL

PUBLISHER'S NOTES

What a journey!

Red Strike evolved not only into Yves Opus Magnum, but also into the most extensive, elaborate and complex game of our young company. But how did this collaboration come about?

Funnily enough, Yves and I met once at a megagame at a convention in Braunfels, when we were playing on the same team.

Some years later (2020) we got in contact again via the CSW forum. The oldest entry about the game there is from 2009 (!).

I immediately saw the great potential of the design and how much work Yves had already invested to realistically reproduce both the mechanics and the Order of Battle.

But we ran into some big challenges. Just the huge number of different values that had to be placed on the counters, the amount of information on the maps, and many more.

In addition, we wanted to use the historical unit badges so we had to research those and we had to illustrate all vehicle, navy and aircraft types individually in a uniform standard.

So it took us over four years of constant work to finally finish the design.

I think it is a complex and realistic game, which is nevertheless a lot of fun to play.

It is also a great toolbox for further scenarios and learning the rules is made much easier by the individual learning scenarios, as this way only a small area of the rules is covered at a time.

Of course, with the current war of aggression from russia against Ukraine, we have been considering whether we can even release a game with a comparable subject matter at this time.

But we came to the conclusion that it is thematically and temporally sufficiently distanced and, moreover, that it is an alternative history game after all.

I would like to take this opportunity to personally thank the numerous volunteers without whom the development of the game would not have been possible. Be it through proofreading, historical advice, playtesting or moral support.

And of course I would like to say a special thank you to Yves for his tireless efforts, his reliability, diligence and above all the great and fun teamwork.

I hope that Red Strike will be well received and that all players will enjoy it as much as we did.

PATRICK GEBHARDT, APRIL 2023

ORDER OF BATTLE

Allied Forces Northern Europe (AFNORTH) was the most northern NATO command located at Kolsås outside Oslo. It was part of Allied Command Europe.
AFNORTH's major subordinate commands were Allied Forces North Norway; Allied Forces South Norway; and Allied Forces Baltic Approaches (Karup).[1] BALTAP comprised AIRBALTAP, NAVBALTAP, LANDZEALAND, responsible for the land defense of Zealand and the other Danish islands, and Allied Land Forces Schleswig-Holstein and Jutland (LANDJUT). From 1962 LANDJUT had been responsible for the defense of the Baltic Approaches from a headquarters at Rendsburg, Germany. It comprised the 6th Panzergrenadier Division and the Danish Jutland Division. LANDJUT was planned to be reinforced in time of war by the United Kingdom Mobile Force, primarily 1st Infantry Brigade plus some other forces.

Allied Forces Central Europe (AFCENT) consisted of two Army Groups:

Northern Army Group (NORTHAG), which includes the British Army of the Rhine (BAOR) and is supported by the 2nd Allied Tactical Air Force (2 ATAF) under the Allied Air Forces Central Europe (AAFCE).

Central Army Group (CENTAG), supported by the 4th Allied Tactical Air Force (4 ATAF) under the Allied Air Forces Central Europe (AAFCE).

Allied Air Forces Central Europe (AAFCE) was the headquarters for NATO air forces in Central Europe from 1953 to 1967 and from 1974 to 1993. It reported to Allied Forces Central Europe (AFCENT). The Headquarters was re-established on June 28, 1974 at Ramstein Air Base, Germany as a principal subordinate command under Allied Forces Central Europe (AFCENT). Ramstein Air Base is located in the German state of Rheinland-Pfalz. Its task was to provide central direction and control for the NATO air forces in the European Central Region through the co-ordination of the two existing headquarters: Second Allied Tactical Air Force (2ATAF), based at Rheindahlen, which covered the northern part of the region, and Fourth Allied Tactical Air Force (4ATAF), based at Heidelberg, which was responsible for the southern area.
Second Allied Tactical Air Force

2nd ATAF, formed in 1958, directed NATO air units in the Netherlands, Belgium, and the northern part of Germany.

Fourth Allied Tactical Air Force
The 4th ATAF, which had been headquartered at Ramstein for many years, included the 1st Canadian Air Group, 1st and 2nd Divisions of Germany's Luftwaffe, and units of the USAFE's Third and Seventeenth Air Force.

POMCUS reinforcements and sites

- 1st Infantry Division (Mech) - Ft Riley, KS: Reinforces VII Corps, POMCUS set 1 at Mannheim, FRG
- 4th Infantry Division (Mech) - Ft Carson, CO: Reinforces V Corps, POMCUS set 2 at Kaiserslautern, FRG
- 194th Armored Brigade - Ft Knox, KY - REFORGER unit, POMCUS set 3 at Pirmasens, FRG
- 197th Infantry Brigade (Mech) - Ft Benning, GA - REFORGER unit, POMCUS set 3 at Pirmasens, FRG
- 2nd Armored Division - Ft. Hood, TX - REFORGER unit, POMCUS set 4 at Monchengladbach, FRG
- 3rd Armored Cavalry Regiment - Ft Bliss, TX: REFORGER unit, POMCUS set 4 at Monchengladbach, FRG
- 212th Field Artillery Brigade - Ft Sill, OK: REFORGER unit, POMCUS set 4 at Monchengladbach, FRG
- 1st Cavalry Division - Ft. Hood, TX - REFORGER unit, POMCUS set 5 at Zutendaal, Belgium
- 5th Infantry Division (Mech) - Ft. Polk, LA - REFORGER unit, POMCUS set 6 Coevorden, Netherlands

RESOURCES

The game system is very close to the design of Mark Herman's Gulf Strike and Aegean Strike.

Other games I took as reference to design this game:

G-SOF-G (S&T 220), NATO: The Next War in Europe (VG), 3rd Fleet (VG), The Next War (SPI) and above all the "Next War" series from GMT.
